# **Chemistry** 1983-2004

LASU-INFO

JAMB Questions

1. X is crystalline salt of sodium. Solution of X in water turns litmus red produces a gas which turns lime water milky when added to sodium carbonate. With barium chloride solution, X gives a white precipitate which is insoluble in dilute hydrochloric acid. X is

A. Na<sub>2</sub>,CO<sub>3</sub> C NaHSO<sub>4</sub> B. NaHCO<sub>3</sub> D Na,SO<sub>3</sub>

E. Na,SO,

2. The alkanol obtained from the production of soap is

A. ethanol B. C. methanol

glycerol
D. propanol

E. glycol

3. The flame used by welders in cotton metals is

A. butane gas flame

B. acetylene flame

C. kerosene flame

D. oxy-acetylene flame

E oxygen flame

4. Consecutive members of an alkane homologous series differ by

A. CH B. CH<sub>2</sub> C. CH<sub>3</sub> D. C<sub>2</sub>H<sub>3</sub>

E.  $CnH_{2n+2}$ 

5. If an element has the lectronic configuration  $1s^22s^22p_6$   $3s_23p_3$ , it is

A. a metal

B. an alkaline earth metal

C. an s-block element

D. a p-block element

E. a transition element

6. Some copper (11) sulphate pentahydrate (CuSO<sub>4</sub>5H<sub>2</sub>O), was heated at 120oC with the following results: Wt of crucible = 10.00 g; Wt of crucible + CuSO<sub>4</sub>5H<sub>2</sub>O=14.98g; Wt of crucible + residue = 13.54g. How many molecules of water of crystallization were lost? [H=1, Cu =63.5, O=16, S=32]

A. 1 B. 2 C. 3 D. 4 E. 5

7. The three-dimensional shape of methane is

A. hexagonal B. tigonal linear D. tertrahedral

E. cubical

C.

## Question 8-10 are based on the following

An unknown organic compound X has a relative molecular mass of 180. It is a colourless crystalline solid, readily soluble in water. X contains the element C, H, and O in the atomic ratio 1:2:1. The compound has a

sweet taste and melts on heating. In the presence of yeast and in the absence of air X is converted to compound Y in the absence of air, X is converted to compound Y and colourless gas.

Compound Y reacts with sodium metal to produce a gas Z which gives a 'pop' sound with a glowing splint. Y also reacts with ethanoic acid to give a sweet smelling compound W.

8. Compound W is

A. a soap B. an oil C. an alkane D. an ester E. sucrose

9. The molecular formula of X is

A. CHO B. CHO C. CHO D. CHO E. CHO

10. reaction of X with yeast forms the basic of the

A. plastic industry

B. textile industry

C. brewing industry

D. soap industry

E. dyeing industry.

11. A mixture of common salt, ammonium chloride and barium sulphate can best be separated by

A. addition of water followed by filtration then sublimation

B. addition of water followed by sublimation then filtration

C. sublimation followed byaddition of water then filtration

D. fractional distillation

E. fractional crystallization.

12. Which of the following relationships between the pressure P, the volume V and the temperature T, represents and ideal gas behaviors?

A. P&VT C. PT&V

B. P & T/VD. PV & VT

E. P & V/T

13.

Solid ammonium chloride Fig. 1.

In the above experiment (fig1) the litmus paper will initially

A. be bleached B. turn green C. turn red D. turn blue

E. turn black

Heat (350°C)

14.	The colour imparted to a flame by calcium ion					
	is					

A. green B. blue

C. brick-red D. yellow

E. lilac

 $M+N \iff P; \quad \triangle H = + Q \ kJ.$ 15. In the reaction Which of the following would increase the concentration of the product?

> A. Decreasing the concentration of N

B. Increasing the concentration of P

C. Adding a suitable catalyst.

D. Decreasing the temperature

16. In which of the following processes is iron being oxidized?

1. Fe + 
$$H_2SO_4 \rightarrow H_2 + FeSO_4$$

2. 
$$\operatorname{FeSO}_{4}^{2} + \operatorname{H}_{2}^{4} \rightarrow \operatorname{FeS}_{4} + \operatorname{H}_{2}^{4} \operatorname{SO}_{4}$$

$$3 \qquad \text{FeCl} + \text{Cl} \longrightarrow 2\text{FeCL}_{3}$$

4 FeCl<sub>3</sub> + SnCl<sub>2</sub>
$$\rightarrow$$
2FeCL<sub>2</sub> + SnCl<sub>4</sub>

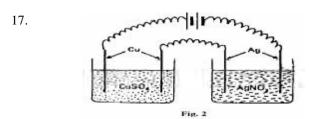

Fig.2

In the above experiment (fig.2), a current was passed for 10 minutes and 0.63 g of copper was found to be deposited on the cathode of CuSO<sub>4</sub> cells. The weight of AgNO<sub>3</sub> cell during the same period would be [Cu = 63, Ag - 108

 $1.08\,\mathrm{g}$ 

2.16 g

,	$\mathcal{C}$		
A.		$0.54\mathrm{g}$	В.
C.		1.62 g	D

E.  $3.24\,\mathrm{g}$ 

18. In the reaction Fe + Cu<sup>2+</sup> $\rightarrow$ Fe<sup>2+</sup> + Cu, iron displaces copper ions to form copper. This is due to the fact that

> iron is in the metallic form while dthe copper is A. in the ionic form

B. the atomic weight of copper is greater than

C. copper metal has more electrons than ion metal

D. iron is an inertmetal

E. iron is higher in the electrochemical series than copper.

The correct name of the compound with the above structural formula is

A. 2-methylbut-1-ene

B. 2-methylbut-2-ene

C. 2-methylbut-1-ene

2-ethyprop-1-ene D.

E. 2-ethylprop-2-ene 20. How many isomeric forms are there for the molecular formula C<sub>2</sub>H<sub>2</sub>Br<sub>2</sub>?

> B. A. 2 1 C. 4 3 D.

E. 5

21. A piece of burning sulphur will continue to burn in a gas jar of oxygen to give misty fumes which readily dissolve in water. The resulting liquid is

> A. sulphur (1V) trioxide

B. Tetraoxosulphate acid (V1)

C. Trioxosulphate (1V) acid

D. Dioxosulphate (11) acid

E. Hydrogen sulphide

22. Sodium decahydrate (Na,SO, 10H,O) an exposure to air loses all its water of crystallization. The process of loss is known as

> Efflorescence B. Hygroscopy A. C. Deliquescence D. Effervescence

E. Dehydration

23. Which of the following happens during the electrolysis of molten sodium chloride?

> A. Sodium ion loses an electron

B. Chlorine atom gains an electron

C. Chloride ion gains an electron

D. Sodium ion is oxidized

Chloride ion isoxidized. E.

24. Crude petroleum pollutant usually seen on some Nigeria creeks and waterways can be dispersed or removed by.

> heating the affected parts order to boil off the A. petroleum

> B. mechanically stirring to dissolve the petroleum

C. pouring organic solvents to dissolve the petroleum

spraying the water with detergents D.

E. cooling to freeze out the petroleum.

25. An element is electronegative if

> it has a tendency to exist in the gaseous form A.

its ions dissolve readily in water B.

C. it has a tendency to lose electrons

it has a tendency to gain electrons D.

E. it readily forms covalent bonds

26. Solution X,Y, and Z have pH values 3.0, 5.0 and 9.0 respectively. Which of the following statements is correct?

> A. All the solution are acidic

B. All solution are basic

C. Y and Z are more acidic than water

D. Y is more acidic than X.

E. Z is the least acidic

#### 27. In the reactions

$$(1) H2 (g) + 1$$

$$2 O_{2}(g) H_{2}O(1); H = -2.86kJ$$

 $(11) C(s) + O_2(g) CO_2(g); H = -406 kJ$ the equations imply that

	A. B.	more heat is absorbed heat is evolved in (1) more heat is absorbed in (11)				<ul><li>D. Column chromatography</li><li>E. Evaporation</li></ul>			
	C.	less heat is evolv					<b>.</b>

			,,	J			r	` ' ')	· I

- D. Addition of trioxonirate (V) (potassium nitrate) solution
- E. Addition of trioxonirate (V) acid (nitric acid) potassium hydroxide solution.
- 43. A jet plane carrying 3,000 kg of ethane burns off all the gas forming water and carbondioxide. If all the

carbondioxide is expelled and the water formed is condensed and kept on board the plane, then the gain in weight is

- A. 1,800 kg B. 900 kg C. 600 kg D. 2,400 kg
- E. 1,200kg
- 44. Liquid X, reacts with sodium trioxocarbonate (IV) (Na<sub>2</sub>CO<sub>3</sub>) to give a gas which turns calcium chloride solution milky. Xis
  - A. Na<sub>2</sub>SO4 (aq) B. KI (ag)
    C. An alkali D. An acid
    E. A hydrocarbon.
- 45. Which of the following statements is FALSE?
  - A. copper (11) ion can be reduced to copper (1) ion by hydrochloric acid and zinc.
  - B. Sodium metal dissolves in water giving oxygen
  - C. Nitrogen is insoluble in water
  - D. Carbondioxide is soluble in water
  - E. Lead has a higher atomic weight than copper
- 46. When sodium dioxonitrate (111) (HaNO<sub>2</sub>\) dissolves is
  - A. Exothermic B. Endothermic
  - C. Isothermic D. Isomeric
  - E. Hydroscopic
- 47. The equilibrium reaction between copper (1) chloride and chloride at 25°C and 1 atmosphere is represented by the equation:

 $2CuCI_2 + CI \iff 2CuCI_2H = -166kJ$ . Which of the following statement is TRUE for the reaction, pressure remaining constant.

A. More CuCl<sub>3</sub> is formed at 40°C

- B. More CuCI<sub>2</sub> is formed at 10°C
- C. Less CuCI<sup>2</sup> is formed at 10°C
- D there is no change  ${\rm CuCI_2}$  formed at 40°C and 10°C
- E. More CuCl<sub>2</sub> is consumed at 40°C
- 48.  $Zn + H^2SO_4 \longrightarrow ZnCI + H_2$

The rate of the above reaction will be greatly increased if.

- A. the zinc is in the powered form
- B. a greater volume of the acid is used
- C. a smaller volume of the acid is used
- D. the reaction vessel is immersed in an ice-bath
- E. the zinc is in the form of pellets.
- 49.  $\operatorname{Zn} + \operatorname{H}_{2}\operatorname{SO}_{4} + \operatorname{H}_{4}$

In the above reaction how much zinc will be left undissolve if 2.00 g of zinc treated with 10cm<sub>3</sub> of 1.0 M of H SO 217n = 65, S=32, O=16, H=11

- of  $H_2SO_4$ ? [Zn =65, S=32, O = 16, H = 1]
- A. 1.35 g B. 1.00 g C. 0.70 g D. 0.65 g
- $E. \qquad 0.06\,\mathrm{g}$
- 50. 30cm3 of 0.1 M AI(NO3)3 solution is reacted with 100cm3 of 0.15M of NaOH solution. Which is in excess and by how much?
  - A. NaOH solution, by 70cm3
  - B. NaOH solution, by 60cm3
  - C. NaOH solution by 40cm3
  - D. AI  $(NO^3)^3$ , solution by 20cm3
  - E. AI  $(NO^3)^3$  solution, by  $10cm^3$

## Chemistry 1984

- 1. Sodium chloride may be obtained from brine by
  - A. titration
- B. decantation
- C. distillation
- D. evaporation
- E. sublimation
- 2. 20cm³ of hydrogen gas are sparked with 20cm³ of oxygen gas in an eudiometer at 373K (100°C) and 1 at atmosphere. The resulting mixture is cooled to 298 K (25°C) and passed over calcium chloride. The volume of the residual gas is
  - A.  $40 \text{cm}^3$
- B.  $20\text{cm}^3$
- C.  $30 \text{cm}^3$
- D. 10cm<sup>3</sup>
- E. 5 cm<sub>3</sub>

- 3. For the reaction  $NH_4NO_2 \rightarrow N_2 + 2H_2O$  calculate the volume of nitrogen that would be produced at S.T.P from 3.20 g of the trioxonirate (111) salt.
  - A.  $2.24 \, \text{dm}^3$
- B.  $2.24 \, \text{cm}^3$
- C.  $1.12 \,\mathrm{cm}^3$
- D.  $1.12 \, \text{dm}^3$
- E.  $4.48 \text{dm}^3$

(Relative atomic masses: N = 14m O = 16, H=1).

- 4. Manganese (1V) oxide reacts with concentrated hydrochloric acid according to the equation
  - $MnO_2 + xHCI \rightarrow MnCI_2 + CI + yH_2O$ . x and y are
  - A. 2 and 5 respectively
  - B. 2 and 4 respectively

- C. and 2 respectivelyD. 4 and s2 respectively
- E. 4 and 1 respectively
- A molar solution of caustic soda is prepared by dissolving
  - A. 40 g NaOH in 100 g of water
  - B. 40 g NaOH in 1000 g of water
  - C. 20 g NaOH in 500 g of solution
  - D. 20 g NaOH in 1000 g of solution
  - E. 20 g NaOH in 80 g of solution.
- 6. Which among the element 1. Carbon 2. Oxygen 3. Copper 4. Bromine 5. Zinc will NOT react with either water of stream?
  - A. 1 and 2
- B. 2 and 3
- C. 3 and 4
- D. 1, 2, and 3
- E. 2, 3 and 5

8.

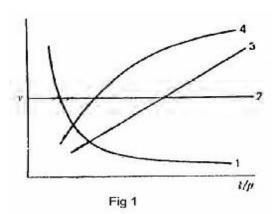

Fig 1

Which of the curves shown in fig 1 represents the relationships between the volume (v) and pressure (p) of an ideal gas at constant temperature?

- A. 1 C. 3
- B. 2 D. 4
- E. 1 and 3
- Naphthalene when heated melts at 354K (81°C). At this temperature the molecules of naphthalene.
- A. decompose into smaller molecules
- B. change their shape
- C. are oxidized by atmospheric oxygen
- D. contract
- E. become mobile as the inter molecular forces are broken.
- 9. The ration of the number of molecules in 2g of hydrogen to that in 16 g of oxygen is
  - A. 2:1
- B. 1:1
- C. 1:2
- D. 1:4
- E 1:8
- 10. Which combination of the following statements is correct?
  - 1. lowering the activation energy
  - 2 conducting the reaction in a gaseous state
  - 3. increasing the temperature
  - 4. removing the products as soon as they are formed

- 5. powdering the reactant if solid
- A. 1,2 and 3 B. 1,3 and 5 C. 2, 3 and 5 D. 3 and 4
- E. 3 and 5
- 11 The balance equation for the reaction of tetraoxosulphate (V1) acid with aluminium hydroxide to give water and aluminium tetraoxosulphate (V1) is
  - A.  $H_2SO_4 + AISO_4 \rightarrow 2H_2O + AISO_4$
  - B.  $HSO_4 + AIOH \rightarrow H_2O + AISO4$
  - C.  $3H2SO_4 + 2AIH_3 \rightarrow 6H2OH + AI(SO_4)_3$
  - D.  $3H2SO4 + 2AI(OH)3 \rightarrow 6H2O + AI(SO_4)_3$
  - E.  $H_2SO_4 + AI(OH)_3 \rightarrow H_2O + AI_2(SO4)_3$

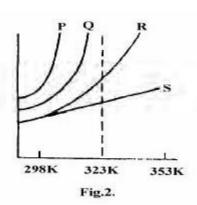

Fig. 2.

The solubility curves of four substances are shown in Fig.2. Which of the four substances would crystallize from a saturated solution cooled from 353 K (80°C) to 323 K(50°C)

- A. P and Q C. P and S
- B. P and RD. R and S
- E. Q and R.
- 13. which of the following mixtures would result in a solution of pH greater than 7?
  - A. 25.00 cm<sup>3</sup> of 0.05 M H<sub>2</sub>SO<sub>4</sub> and 25.00 cm<sup>3</sup> of 0.50 m Na<sub>2</sub>CO<sub>2</sub>
  - B. 25.00 cm<sup>3</sup> of 0.50 M H<sub>2</sub>SO<sub>4</sub> and 25;00 cm<sup>3</sup> of 0.10 M NaHCO<sub>2</sub>
  - C. 25.00 cm<sup>3</sup> of 0.1<sup>3</sup>1 M H<sub>2</sub>SO<sub>4</sub> and 25.00 cm<sup>3</sup> of 0.10M NaOH
  - D.  $25.00 \text{ cm}^3 \text{ of } 0.11 \text{ M H}_2\text{SO}_4 \text{ and } 50.00 \text{ cm}^3 \text{ of } 0.50 \text{ M NaOH}$
  - E. 25.00 cm<sup>3</sup> of 0.25 MH<sub>2</sub>SO<sub>4</sub> and 50.00 cm<sup>3</sup> of) .20 M NaOH
- 14. In which of the following reactions does hydrogen peroxide acts as a reducing agent?
  - A.  $H_xS + H_xO \rightarrow S + 2H_xO$
  - B.  $PbSO_3 + H_2O_3 \longrightarrow PbSO_4 + H_2O$
  - C.  $2'! + 2H + H_2O \longrightarrow I_2 + 2H_2O$
  - D.  $PbO_2 + 2HNO_3 + H_2O_2 \longrightarrow Pb (NO_3)_2 + 2H_2O + O_2$
  - E.  $SO + H_2O_2 \longrightarrow H_2SO_4$
- 15. For the reaction  $2Fe + 2^{e-} \longrightarrow 2Fe^{2+} + I_2$ , which of the following statements is TRUE?
  - A. Fe is oxidized to Fe<sub>3</sub>
  - B.  $Fe^{3+}$  is oxidized to  $Fe^{2+}$

- C. I is oxidized to I
- D. I- is reduced to I<sub>a</sub>
- E. I is displacing an electron from Fe<sup>3+</sup>

16.

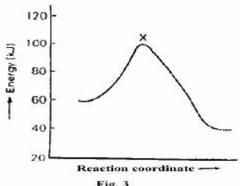

Fig. 3

The diagram above (Fig. 3) shows the energy profile for the reaction A+B=C+D. form this diagram, its clear that the reaction is

- spontaneous A.
- B. isothermal
- C. adiabatic
- D. exothermic
- E. endothermic
- 17. In dilute solute the heat of the following NaOH + HCI =  $NaCI + H_2O + H_2SO_4 \rightarrow Na_2SO_4 + 2H_2Ois$ 
  - A. +28.65 kJ
- B. -28.65 kJ
- C. +57.3 kJ
- -114.6 kJD.
- E. -229.2 kJ
- 18. For the reactions: (1 Melon oil + NaOH ! Soap + Glycerol (11) 3Fe + 4H2 $\Theta$  Fe<sub>3</sub>O<sub>4</sub> + 4H, (111) N<sub>2</sub>O<sub>4</sub> 2NO<sub>2</sub>. Which of the following statements is true?
  - Each of the three reactions requires a catalyst A.
  - B. All the reactions demonstrate Le Chatelier's principle
  - C. The presence of a catalyst will increase the yield of products
  - Increase in pressure will result in higher yields D. of the products in 1 and 11 only
  - Increase in pressure will result in higher of the E. products in 111 only.
- 19. Which of the following methods may be used to prepare trioxonirate (V) acid (nitric acid) in the laboratory?
  - A. Heating ammonia gas with tetraoxosulphate (1V) acid
  - B. Heating ammonium trioxosulphate (V) with tetraoxonitrate (V)acid
  - C. Heating sodium trioxonirate (v) with tetraoxosulphate (V1) acid
  - Heating potassium trioxonirate (V) with calcium D. hydroxide.
  - E. Heating a mixture of ammonia gas and oxygen\
- 20. Lime -water, which is used in the laboratory for the detection of carbon (1V) oxide, is an aqueous solution of:
  - A. Ca (OH),
- В. CaCO,
- C. CaHCO,
- D. CaSO,
- E. N<sub>2</sub>CO<sub>3</sub>

- 21. An element that can exist in two or more different structure forms which possess the desame chemical properties is said to exhibit
  - A. polymerism
- B. isotropy
- C. isomorphism
- D. isomerism
- E. allotropy.
- 22. Sulphur....
  - A. Forms two alkaline oxides
  - B. Is spontaneously flammable
  - C. Burns with a blue flame
  - Conducts electricity in the molten state D.
  - Is usually stored in the form of sticks in water. E.
- 23. Which off the following statements is NOT true of carbon monoxide?
  - CO is poisonous A.
  - B. CO is readily oxidized at room temperature by air to form Co.
  - C. CO may be prepared by reducing CO, mixed coke heated to about 1000°C
  - D. CO may be prepared by heating charcoal with a limited amount of O<sub>2</sub>
  - E. CO is a good reducing agent.
- 24. From the reactions:

 $ZnO + Na_{\bullet}O \longrightarrow Na_{\bullet}ZnO$  and

 $ZnO+CO^{2} \longrightarrow ZnCO^{3}$  it may be concluded that zinc oxide is

D.

- A. neutral C.
- B. basic

amphoteric

- acidic E a mixture
- An example of a neutral oxide is 25.
  - A. AL,O, C. CO,
- NO, B. D. CO
- E SO,
- $3CI_2 + 2NH_3 \rightarrow N_2 + 6HCI$ . In the above reaction, ammonia acts as.
- A. a reducing agent

26.

- B. an oxidizing agent
- C. an acid
- D. a catalyst
- E. a drying agent
- 27. In the Haber process for the manufacturer of ammonia, finely divided iron is used as
  - an ionizing agent Α.
  - B. a reducing agent
  - C. a catalyst
  - a dehydrating agent D.
  - an oxidizing agent.
- An organic compound with a vapour density 56.5 has 28. the following percentage composition: C = 53.1%, N =12.4%, O = 28.3%, H = 6.2%. The molecular formula of the compound is
  - C.H.O.N A. C.  $(\tilde{C}_5\tilde{H}_7\tilde{O}_7N)^{1/2}$
- B. C<sub>2</sub>H<sub>2</sub>O<sub>2</sub>N
- C<sub>5</sub>H<sub>7</sub>O<sub>7</sub>N D.
- E.  $(C_5H_7ON)_2$
- Relative atomic masses: N = 12.4%, O = 28.3%, H = 1)

29.	The hyl	bridization	of the	carbon	atom in	ethyne is
		Sp^		B.	$\mathrm{sp}^3$	•

 $sp^2$ C.

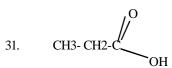

D. sp

E.

30. When the kerosene fraction form petrol is heated at high temperature, a lower boiling liquid is obtained. This process is known as

> A. polymerization refining C. hydrogenation D. cracking

E. fractional distillation

Is

A. acetic acid B. propanal C. D. propanol ethanoic acid

E. propanoic acid

Alkaline hydrolysis of naturally occurring fats and oils 32. yields.

> A. fats and acids

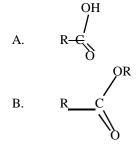

B. soaps and glycerol

C. D. margarine and butter

esters

E. detergents.

33. Which of the following represents a carboxylic acid?

C. H2SO4.

R - COOCOR D.

34. which of the statement is INCORRECT?

- A. fractional distillation of crude petroleum will give following hydrocarbon fuels in order of increasing boiling point: Butane < petrol < kerosene
- B.  $H_2C = CH_2$  will serve as a monomer in the preparation of polythene
- C. Both but -1- ene and but -1-1yne willdecolorize bromine readily.
- D. But -2 ene will react with chlorine to form 2, 3 dichlorobutane.
- E. Calcium carbide will react with water to form any alkayne

35. which of the following statement is NOT correct about all four of the acids: HBr, HNO<sub>3</sub>H<sub>2</sub>CO<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>? They

dissolve marble to liberate litmus red A.

В. have a pH less than 7

C. turn blue litmusred

D. neutralize alkalis to form salt

E. react with magnesium to liberate hydrogen.

36. If the cost of electricity required to deposit 1 g old magnesium is N5.00. How much salt would it cost to deposit 10 g of aluminium?

> A. N10.00

N27.00 B.

C. N44.44 D. N66.67

E. N33.33.

(Relative atomic masses: AI = 27, Mg = 24).

In an experiment, copper tetraoxosulphate (V1) solution was electolysed using copper electrodes, The mass of copper deposited at the cathode by the passage of 16000 coulombs of electricity is

> A. 16.70 g

17.60g

C. 67.10g

D. 10.67g

E. 60.17 g

(Relatively atomic masses: Cu = 63.5 m O = 16,

$$H = 1, S = 32$$
).

 $^{3}{}_{1}R$   $^{-19}{}_{9}U$   $^{24}$   $^{-12}S$   $^{-20}{}_{10}T$   $^{-19}{}_{7}$ . Which of the following 38. statements is NOT true of the elements R, U, S, T, Y?

> A. R is an isotope of hydrogen

B. U and Y are isotopes

C. R.U.S and T are metals

D. T is a noble gas

E. S will react with oxygen to form SO

39. Nitrogen can best be obtained from a mixture of oxygen and nitrogen by passing the mixture over

> A. potassium hydroxide

B. heated gold

C. heated magnesium

D. heated phosphorus

E. calcium chloride.

40. Water is said to be 'hard' if it

> easily formsice A.

B. has to be warmed before sodium chloride dissolves in it

C. forms an insoluble scum with soar

D. contains nitrates

E. contains sodium ions.

41. Sodium hydroxide (NaOH) pellets are

deliquescent B. A.

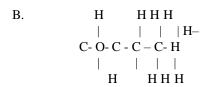

hygroscopic

C. efflorescent D. hydrated

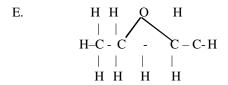

E. fluorescent.

42. Which of the following structure formulae is NOT numeric with others?

- 43. Alkalines
  - A. are all gases
  - B. have the general formula  $C_nH_{2n} + {}_2O$
  - C. contains only carbon and hydrogen
  - D. are usually soluble in water
  - E. are usually active compounds.
- 44. If an excess of a liquid hydrocarbon is poured into a jar of chlorine, and the sealed jar is then exposed for several hours to bright sunlight, all the chlorine gas is consumed. The hydrocarbon is said to have undergone
  - A. a polymerization reaction
  - B. an isomerization reaction
  - C. an addition reaction
  - D. a substitution reaction
  - E. a reduction reaction
- 45. The function of conc. H<sub>2</sub>SOH<sub>4</sub>in the etherification of ethanoic acid with ethanol is to
  - A. serves as a dehydrating agent
  - B. serves as solvent
  - C. act as a catalyst
  - D. prevent any side reaction
  - E. serve as an oxidizing reaction

- A piece of sea shell, when dropped into a dilute solution of hydrochloric acid produces a colourless odorless gas, which turns clear limewater milky. The shell contains
  - A. sodium chloride

46.

- B. ammonium nitrate
- C. calcium carbonate
- D. calcium chloride
- E. magnesium chloride
- 48. An aqueous solution of a metal salt, Mm gives a white precipate with NaOH, which dissolves in excess NaOH. With aqueous ammonium the solution of M also gives a white precipate which dissolves in excess ammonia. Therefore the caution in M is
  - A.  $Zn^{++}$
  - B. Ca<sup>++</sup>
  - $C. \qquad AI^{+++}$
  - D. Pb<sup>++</sup>
  - E.  $Cu^{++}$
- 49. The I.U.P.A. C name for the compound

$$\begin{array}{c} H \\ | \\ \text{CH- C- CH}_2\text{- CH}_3 \\ | \\ \text{CH}_3 \text{ is} \end{array}$$

- A. isopropylethene
- B. acetylene
- C. 3-methylbutane
- D. 2-methybutane
- E. 5-methypentane.
- 50. At S.T.P how many litres of hydrogen can be obtained from the reaction of 500cm<sup>3</sup> of 0.5 M H<sub>2</sub>SO<sub>4</sub> excess zinc metal.
  - A. 22.4 dm<sub>3</sub>
  - B.  $11.2 \, dm_3$
  - C. 6.5 dm<sub>2</sub>
  - D. 5.6 dm<sub>3</sub>
  - E. 0.00 dm<sub>3</sub>

(Gram molecular volume of  $H2 = 22.4 \text{ dm}_3$ )

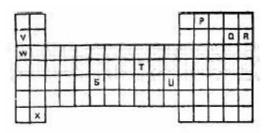

Fig. 1

- 1. Figure shows part of the periodic Table. Which of the elements belongs to the p-block?
  - A. S,T and U.
  - B. V, W and X
  - C. S and T only
  - D. P, Q and R
  - E. V,W, X and S.
  - Which of the following conducts electricity? 2
    - Sulphur A.
- B. Graphite
- C. Diamond
- Red phosphorus D.
- E. Yellow phosphorus.
- An organic compound contains 72% carbon 12% 3 hydrogen and 16% oxygen by mass. The empirical formula of the compound is
  - C.H.,O.
- $C_6H_{10}O_3$   $C_6H_{12}O$
- C.  $C_{12}H_{12}O$ E.
- C<sub>3</sub>CH<sub>10</sub>
  - (H=1, C=12, O=16).
- 0.499 of CuSO .xH O when heated to constant weight 4. gave a residue of 0.346 g. The value of x is
  - A. 0.5
- B. 2.0
- C. 3.0
- D. 4.0
- E 5.0.
- (Cu = 63.5, S = 32.0 O = 16, H = 1).
- In an experiment which of the following observation 5. would suggest that a solid sample is a mixture? The
  - solid can be ground to a fine powder A.
  - density of the solid 2.25 g dm-3 B.
  - C. solid begins to melt until 648 K
  - D. solid absorbs moisture from the atmosphere and turns into a liquid
  - solid melts at 300 K. E.
- Hydrogen diffuses through a porous plug 6.
  - at the same rate as oxygen A.
  - at a slower rare than oxygen B.
  - C. twice as fast as oxygen
  - D. three times as fast as oxygen
  - E. four times as fast as oxygen.
  - 1. Given the molecular mss of iron is 56 and that of oxygen is 16, how many moles of Iron (111) oxide will be contained in 1 kg of the compound?

- A. 25.0 moles 6.25 moles
- В. 12.5 moles D. 3.125 moles

72

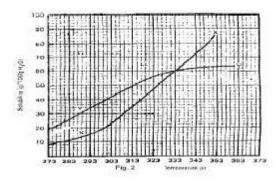

89

- E. 0.625 moles
- 3.0 g of a mixture of potassium carbonate and potassium chloride were dissolved in a 250cm<sup>3</sup> standard flask. 25 cm<sub>3</sub> of this solution required 40.00cm<sup>3</sup> of 0.1 M HCI for neutralization. What is the percentage by weight of K<sub>2</sub>CO<sub>2</sub> in the mixture?

A. 60 B. C. D.

E. 92 (K = 39, O = 16, C = 12).

- 9. At room temperature (300K)
  - Α. Y is twice as soluble as X
  - B. X is twice as soluble as Y
  - C. X and Y soluble to the same extent
  - D. X is three times as soluble as Y
  - Y is three times as soluble as X
- 10. If 80 g each of X and Y are taken up in 100g of water at 353 K we shall have.
  - A. only 10 g of X and Yundissolve
  - B. only 16 g of Y undissolve
  - 10 g of X and 16 g of Y undissolved C.
  - all X and Y dissolved D.
  - all X and Yundissolved E.
- 11. If the molar mass of X is 36 g, the number of moles of X dissolved at 343 is

A. 0.2 moles B. 0.7 moles C. 1.5 moles D. 2.0 moles

- E. 3.0 moles
- 12. Some properties of chemical substances are mentioned below (i) solar taste (ii)slippery to touch (iii)yields alkaline gas with ammonium salts (iv) has pH less than 7 (v) turns phenolphthalein pink. Which of the above are NOT typical properties of alkaline?
  - A. (i), (iv) and (v)
  - B. (iv) and (v)

	C.	(i) and (iv)				carbo	n monoxide and	high level	of methar	ne, the

- 29. When pollen grains are suspended in water and viewed through a microscope, they appear to be in a state of constant but erratic motion. This is due to
  - A. convection currents

Orange

- B. small changes in pressure
- C. small changes in temperature
- D. a chemical reaction between the pollen grains and water
- E. the bombardment of the pollen grains by molecules of water.
- 30. The energy change (H) for the reaction  $CO_{(g)} + \frac{1}{2}O2_{(g)} \longrightarrow CO2_{(g)}$  is

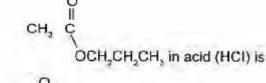

A. -503.7 kJ B.  $+503.7 \, kJ$ 

C.  $-282.9 \, kJ$  D.  $+282.9 \, kJ$ 

E. +393.3 kJ

 $(Hi(CO) = -110.4 \text{ kJ mol}^{-1}(Hi(CO)) = -393 \text{ kJ mol}^{-1}$ 

31. The product formed on hydrolysis of

- 32. The neutralization reaction between NaOH solution and nitrogen (1V) oxide (NO<sub>2</sub>) produces water and
  - NaNO, and NaNO, A.
  - B. NaNO, and HNO,
  - C. NaNO,
  - D. NaNO<sub>2</sub>
  - E. NaN,O,

33. The oxidation of CH- CH- C- O gives

> A. 2-butanone

B. 2-butanal D. butanoic acid

Н Н

C. butane E. 3-butanal.

34. Tetraoxosulphate (V1) ions are finally tested using

CH,

acidified silver nitrate A.

B. acidified barium chloride

C. lime -water

D. dilute hydrochloric acid

E. acidified lead nitrate

35. The I.U.P.A.C name for the compound

A. 2-methl-3-patene

B. 4-methy-2-pentane

C. 2-methl-2-penten

D. 4-methyl-3-pentene

E. 2-methyl-3-pentane

36. Mixing of aqueous solution of barium hydroxide and sodium tetraoxocarbonate(1V) yields a white precipitate of

> A. barium oxide

B. sodium tetraoxocarbonate(1V)

C. sodium, oxide

sodium hydroxide D.

E. barium tetraoxocarbonate.

37. An organic compound decolorized acidified KMnC<sub>4</sub> solution but failed to react with ammoniacal silver nitrate solution. The organic compound is likely to be.

> a carbonxyllic acicd A.

an alkane B.

C. an alkene

D. an alkyne

E. an alkanone

38. Solid sodium hydroxide on exposure to air absorbs a gas and ultimately gives another alkaline substance with the molecular formula.

> A. NaOH.H,O

B. NaOH.N,

C. Na,CO, D. NaHCO,

E. NaNO,

39. Which of the following is the functional group of carboxylic acids?

> A. -OH

B. >C=O

C. >C-OH

D. OH

E. -C = N

40.		n of the following ant in the universe		tances is the most	46.				acid to an aqueous

The number of atom chlorine present in 5.85 g of NaCI 4. is

 $6.02 \times 10^{22}$ A.

B. C. 5.85 x 10 6.02 x 10<sup>293</sup>

D.  $5.85 \times 10^{24}$ 

[Na = 23, Cl = 35.5]

Avogadro's Number =  $6.02 \times 10^{23}$ ]

5. How much of magnesium is required to react with 250cm<sup>3</sup> of 0.5 M HCl?

> A.  $0.3\,\mathrm{g}$

B.  $1.5\,\mathrm{g}$ 

C.  $2.4\,\mathrm{g}$  D. 3.0g

[Mg = 24]

200cm3 of oxygen diffuse through a porous plug in 50 6. seconds. Hoe long will 80 cm3 of methane (CH4) take to diffuse through the same porous plug under the same conditions?

> A. 20 sec

B. 20 sec

C. 14 sec D. 7 sec

[C = 12, O = 16, H = 1]

7. The relationship between the velocity (U) of gas molecules and their relative molecule mass (M) is shown by the equation

 $\hat{U} = (kM) \frac{1}{2}$ Α

B.  $\hat{\mathbf{U}} = (\mathbf{k}\mathbf{M})^2$ 

 $\hat{\mathbf{U}} = \mathbf{k}$ C.

 $\hat{\mathbf{U}} = (\hat{\mathbf{k}}/_{-}) \frac{1}{2}$ D

8. An element with atomic number twelve is likely to be

> A. electrovalent with a valency of 1

> electrovalent with a valency of 2 B.

C. covalent with a valency of 2

D. covalent with a valency of 4

9. Which of the following group of physical properties increases form left to right of the periodic table? 1 lonization energy 2 Atomic radius 3 Electronegativity 4 Electron affinity

A.

1 and 2

Β.

1, 2 and 3

C. 3 and 4 D. 1, 2, 3 and 4

When 50 cm<sup>3</sup> of a saturated solution of sugar (molar 10. mass 342.0 g) at 40°C was evaporated to dryness, 34.2 g dry of solid was obtained. The solubility of sugar of 40°C is

A.

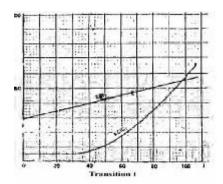

10.0 moles dm<sup>-3</sup>

7.0 moles dm<sup>-3</sup>

B. D.

C. 3.5 moles dm<sup>-3</sup> 2.0 moles dm<sup>-3</sup>

11.

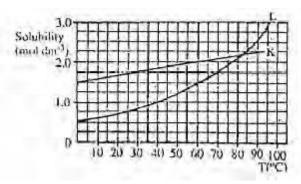

In the solubility curve above, water at 98oC is saturated with KCl impurity in the crystals formed when the solution is cooled to 30oC?

NaHSO<sub>4</sub>, Ph<5 Na<sub>2</sub>CO<sub>3</sub>, Ph>8 A. B.

C. Na<sub>2</sub>Cl, Ph=7

NaHCO, Ph<6 D.

13. Which of the following is an acid salt?

> A. NaHSO.

C. CH,CO,Na D. Na<sub>2</sub>S

14. Which of the following solution will conduct the least amount of electricity?

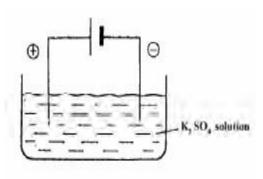

2.00 M aqueous solution of NaOH A.

B. 0.01 M aqueous solution of NaOH

C. 0.01 m aqueous solution of hexaonic acid

D. 0.01 M aqueous solution of sugar.

15.

In the electrolysis of aqueous solution of K<sub>2</sub>SO<sub>4</sub> in the above cell, which species migrate to the anode?

SO<sub>2</sub>- and OH-A.

A.

K<sup>+</sup> and SO<sup>2</sup>

Off and H O

H O and K<sup>+</sup>

16. How many coulombs of electricity are passed through a solution in which 6.5 amperes are allowed to run for 1.0 hour?

 $3.90 \times 10^2$  coulombs

B.  $5.50 \times 10^3$  coulombs

 $6.54 \times 10^3$  coulombs C.

2.34 x10<sup>4</sup> coulombs D.

17. Which of these represents a redox reaction?

A. 
$$AgNO_3 + NaCl \rightarrow AgCl + NNO_3$$
  
B.  $H2s + Pb(NO_3)_2 \rightarrow PbS + 2HNO_3$ 

B. 
$$H2s + Pb(NO_s) \rightarrow PbS + 2HNO_s$$

C.  $CaCO_3 \rightarrow CaO + CO_5$ 

 $Zn + 2HCl \rightarrow ZnCl_2 + H_2$ D.

	A.	4;1;2

B. 3:8:2

C. 2;8;3

D. 8;3;2

- The iron (111) oxide impurity in bauxite can be removed 36.
  - A. fractional crystallization in acid solution
  - B. dissolution in sodium hydroxide and filtration
  - C. extraction with concentrated ammonia and reprecipitation
  - D. electrolysis of molten mixture.
- 38. A white solid suspected to be lead trioxonirate (V), zinc trioxocarbonate(1V) of calcium trioxocarbonate (1V) was heated strongly. Its residue, which was yellow when hot and white when cold, is

A.

lead (11) oxide B.

calcium oxide

C. zinc oxide D. lead nitrite

39. Which of the following compounds would give lilac fame coloration and a white precipitate with acidified barium chloride solution?

> A. KC1

B. NaNO,

C. K,SO D. CaSO

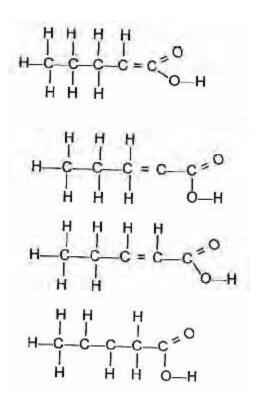

- 40. How will a metal X, which reacts explosively with air and with dilute acids be best extracted from its ores?
  - A. Electrolysis of the solution of its salt
  - B. Decomposition of its oxide
  - C. Displacement from solution by an alkali metal
  - Electrolysis of fused salt D.
- Which of the following is NOT correct for the named 41. organic compound in each case?
  - Butanoic acid solution gives effervescence A. with Na<sub>2</sub>CO<sub>2</sub> solution
  - B. Glucose when reacted with Na CrO at 0°C will show immediate discharge of colour
  - C. When but-2-ene is reacted with dilute solution of KmnO4 the purple colour of KMnO is discharge readily even at room temperature
  - When butan-2-ol is boiled with Butanoic acid D. with a drop of concentrated H<sub>2</sub>SO<sub>4</sub> a sweet smelling liquids is produced.
- Which of the following is used as an'anti-knock' in 42. automobile engines?
  - A. Tetramethyl silane
  - B. Lead tetra-ethyl
  - C. Glycerol
  - D. N-heptanes
- 43. What reaction takes place when palm-oil is added to potash and foams are observed?
  - Neutralization A.
  - B. Saponification
  - Etherification C.
  - D. Salting-out

44. How many isomers can be formed from organic compounds with the formula C<sub>3</sub>H<sub>6</sub>O?

> 2 A. C. 4

3 D. 5

45. Which of the structural formula for pent-2-enoic acid?

- 46. When ethanol is heated with excess concentrated sulphuric acid, theethanol is
  - oxidized to ethene A.
  - B. polymerized to polyethene
  - C. dehydrated to ethene
  - D. dehydrated to ethyne.
- 47. Which of the following compounds is NOT formed by the action of chlorine on methane?

CH,Cl A. C. CH,Cl, B. C,H,Cl D. CHCl,

48. The general formula of an alkyl halide (where X represent the halide) is

> A.  $C_nH_{2n}-X$ C.  $C_{n}H_{2n} + X$

B. D.  $\begin{matrix} -C_nH_{2n} + _1X \\ C_-H_{2n}X \end{matrix}$ 

49. Which of the following are made by the process of polymerization?

Nylon and soap B. A.

Nylon and rubber

C. Soap and butane D. Margarine and Nylon

50. Starch can converted to ethyl alcohol by

> distillation A.

B. fermentation

C. isomerization D. cracking.

1.	A brand of link containing cobalt (11), copper (11) and
	irons can best be separated into its various components
	by.

A. fractional crystallization

B. fractional distillation

C. sublimation

D. chromatography.

#### 2. Which of the following substances is a mixture?

Granulated sugar A.

B. Sea-water

C. Sodium chloride

D. Iron fillings

#### 3. The number of molecules of carbon (1V) oxide produced when 10.0 g CaCO<sub>2</sub> is treated with 0.2 dm<sup>3</sup> of 1 M HCl in the equation $CaCO_3 + 2HCI \longrightarrow CaCl_2 + H_2O + CO_3$ is

A.  $1.00 \times 10^{23}$ 

B.  $6.02 \times 10^{23}$ 

 $6.02 \times 10^{22}$ C.

D.  $6.02 \times 10_{23}$ [Ca=40, O=16, C=12, N<sub>A</sub>=6.02 x  $10^{23}$ , H=1, Cl=35.5]

4. In the reaction 
$$CaC_{2(s)} + 2HO_{2(1)} \longrightarrow Ca$$
 (OH + C H<sub>2(s)</sub> 2<sub>2(g)</sub> what is the mass of solid containing age at S T P<sup>2</sup>

what is the mass of solid acetylene gas at S.T.P?

A.  $3.8\,\mathrm{g}$ C.  $2.0\,\mathrm{g}$ 

B.  $2.9\,\mathrm{g}$ 

 $1.0\,\mathrm{g}$ D  $[C = 12, Ca - 40, G.M.V = 22400 \text{ cm}^3]$ 

1.650 atm Α.

B. 0.825 atm

C. 0.413 atm D. 0.275 atm

#### 6. Which of the following substances has the lowest vapour density?

A. Ethanoic acid Propanol

C. Dichlomethane D.

Ethanal

[O = 16, Cl = 35.5, H = 1, C = 12]

B.

#### 7. If d represents the density of a gas and K is a constant, the rate of gaseous diffusion is related to the equation

A. r = kd

B. r = kd

C.

r = k dD.

### 8. An isotope has an atomic number of 17 and a mass number of 36. Which of the following gives the correct number of neutrons and protons in an atom of the isotope?

	Neutrons	Protons
A.	53	17
B.	17	36
C.	19	17
D.	36	17

9. The atomic numbers of two elements X and Y are 12 and 9 respectively. The bond in the compound formed between the atoms of these two elements is.

> ionic A.

B. convalent

C. neutral D. co-ordinate.

An element Z, contained 90% of  $^{16}_{s}$  Z and 10% of  $^{18}_{s}$  Z 10. Its relative atomic mass is

> 16.0 A.

B. 16.2 17.8

C. 17.0 D.

11. The greater the difference in electronegativity between bonded atoms, the

> A. lower the polarity of the bond

higher the polarity of the bond

C weaker the bond

higher the possibility of the substance formed being a molecule.

12. A stream of air was successively passed through three tubes X, Y, and Z containing a concentrated aqueous solution of KOH, red hot copper powder and fused calcium chloride respectively. What was the composition of gas emanating from tube Z?

> CO<sub>2</sub> and the inert gases A.

N<sub>2</sub>, CO and the inert gases N<sup>2</sup> and the inert gases B. C.

D. Water vapour, N, and the inert gases.

13. In the purification of town water supply, alum is used principally to.

> A. kill bacteria

B. control the pH of water

C. improve the taste of the water

D. coagulate small particles of mud.

14. Which of the following water samples will have the highest titer value wages titrated for the Ca<sup>2+</sup> ions using soap solution?

> Permanently hard water after boiling A.

B. Temporarily hard water after boiling

C. Rain water stored in a glass jar for two years

D. Permanently hard water passed through

15. Oil spillage in ponds and creeks can be cleaned up by

> A. burning off the oil layer

> B. spraying with detergent

C. dispersal with compressed air

spraying with hot water.

16. The solubility of Na<sub>3</sub>AsO<sub>4</sub>(H<sub>2</sub>O)<sub>12</sub> is 38.9 g per 100 g H2O. What is the percentage of Na<sub>3</sub>AsO<sub>4</sub> in the saturated solution?

> 87.2% A.

38.9% В.

C. 19.1% D. 13.7%

[As = 75, Na = 23, O = 12, H = 1]

17. Which is the correct set results for tests conducted respectively on fresh lime and ethanol?

Test	Fresh lime juice	Ethanol					
A. Add crystals of NaHCO <sub>3</sub>	Gas evolve	No gas evolved					
B. Test with methyl orange	Turns colourless	No change					
C. Taste	Bitter	Sour					
D. Add a piece of sodium	No gas evolved	H <sub>2</sub> evolved					

- 18. In which of the following are the aqueous solutions of each of the substances correctly arranged in order of decreasing acidity?
  - Ethanoic acid, milk of magnesia, sodium A. chloride, hydrochloric acid and sodium hydroxide.
  - B. Ethanoic acid hydrochloric acid, milk of magnesiam sodium chloride and sodium, hydroxide.
  - C. Hydrochloric acid, ethanoid acid solution chloride, milk of magnesia and sodium
  - D. Hydrochloric acid sodium hydroxide sodium chloride ethanoic acid and milk of magnesia
- 19. The basicity of tetraoxophosphate (v) acid is
  - 7 A.

B.

C. 4

- 5 D. 3
- If 24.83 cm<sup>3</sup> of 0.15 M NaOH is tritrated to its end 20. point with 39.45 cm3 of HCl, what is the molarity of the HCl?
  - A.  $0.094 \, \mathrm{M}$
- B.  $0.150\,{\rm M}$
- C.  $0.940\,M$
- D. 1.500 M
- A quantity of electricity liberates 3.6 g of silver from 21. its salt. What mass of aluminium will be liberated from its salt by the same quantity of electricity?
  - Α  $2.7\,\mathrm{g}$
- B.  $1.2\,\mathrm{g}$
- C. 0.9 g
- D. 0.3g
- 22. Which of the following statements is CORRECT if 1 Faraday of electricity is passed through 1 M CuSO<sub>4</sub> solution for 1 minute?
  - A. The pH of the solution at the cathode decreases
  - B. The pH of the solution at the anode decreases
  - C. 1 mole of Cu will be liberated at the cathode
  - D. 60 moles of Cu will be liberated at the anode.
- What mass of magnesium would be obtained by 23. passing a current of 2 amperes for 2 hrs. 30mins through molten magnesium chloride?
  - $1.12\,\mathrm{g}$  $2.24\,\mathrm{g}$
- D.
- [1 faraday = 96500 coulombs, Mg = 24]
- 24. In the reaction of  $3CuO + 2NH_3 \longrightarrow 3Cu + 3H_2O + N_3$ how many electrons are transferred for each mole to copper produced?
  - $4.0 \times 10^{-23}$ A.
- $3.0 \times 10^{-23}$ B.
- C.  $1.2 \times 10^{24}$
- D.  $6.0 \times 10^{24}$

- 25. Z is a solid substance, which liberates carbon (1V) oxide on treatment with concentrated H<sub>2</sub>SO<sub>4</sub>, KnnO<sub>4</sub>. The solid substance, Z is
  - sodium hydrogen trioxocarbonate(1V) .A.
  - B. ethanoic acid
  - C. iron (11) trioxocarbonate(1V)
  - D. ethanedioc acid (oxalicacid)
- 26. 5 g of ammonium trioxonirate (V) on dissolution in water cooled its surrounding water and container by 1.6kJ. What is the heat of solution of NH<sub>4</sub>NO<sub>2</sub>?
  - A. +51.4 kJ mol<sup>-1</sup>
    - B. +25.6 kJ mol<sup>-1</sup>
  - C. +12.9 kJ mol<sup>-1</sup>
- -6.4 kJ mol<sup>-1</sup> D.

$$[N = 14, O = 16, H = 1]$$

- 27. Tetraoxosulphate (1V) acid is prepared using the chemical reaction  $SO_{3(g)} + H_2O_{(1)}H_2SO_{4(1)}$ . Given the heat of formation for  $SO_{3(g)}$ ,  $H_2O_{(1)}$  and  $H_2SO_{4(1)}$  as -395kJ mol-1 -286 kJ mol-1 and -811 kJ mol-1 respectively is
  - A. -1032 kJ
- B. -130kJ
- C. +130kJ
- D.  $+1032 \, kJ$
- 28. The times taken for iodine to be liberated in the reaction between sodium thisosulphate and hydrochloric acid at various temperatures are as follows:

Temp°C	25	35	45
Time (seconds)	72	36	18

These results suggest that.

- A. for a 10° rise in temperature rate of reaction is
- B. for a 10° rise in temperature rate of reaction is halved
- C. time taken for iodine to appear does not depend on temperature
- D. for a 10° rise in temperature, rate of reaction is tripled.
- 29. The reaction between sulphur (1V) oxide and oxygen is represented by the equilibrium reaction

 $2SO_{2(g)} H + O_{2(g)} \longrightarrow 2SO_{3(g)} H = -196 \text{ kJ. What factor}$ would influence increased production SO<sub>3(n)</sub>?

- A. Addition of a suitable catalyst
- В. Increase in the temperature of the reaction
- C.
- Decrease in the temperature of  $SO_{2(g)}$  Decrease in the concentration of  $SO_{2(g)}$ D.
- 30. Which of the following equations correctly represents the action of hot concentrated alkaline solution on chlorine?
  - A.
  - $\begin{array}{c} \text{Cl}_{2(g)} + 2\text{OH} \xrightarrow{\hspace{-0.5cm} \longrightarrow} \text{OCl}_{(g)} + \text{Cl}_{(g)} + \text{H}_2\text{O}_{(1)} \\ 3\text{Cl}2(g) + 6\text{OH} \xrightarrow{\hspace{-0.5cm} \longrightarrow} \text{ClO}_{3(g)} + 5\text{Cl} \ (aq) + 3\text{H}_2\text{O}_{(1)} \\ 3\text{Cl} + 6\text{OH} (aq) \xrightarrow{\hspace{-0.5cm} \longrightarrow} \text{ClO}_{3(g)} + 5\text{Cl} + 3\text{H}_2\text{O}_{(1)} \end{array}$ B. C.
  - D.  $3C12(g) + 6OH(aq) \longrightarrow 5C1O3(aq) + C1 (aq)$ +3H2O(1)
- 31. Magnesium ribbon was allowed to burn inside a given gas Pleaving a white solid residue Q. Addition of water to Q liberated a gas which produced dense white fumes with a drop of hydrochloric acid. The gas Pwas
  - A. nitrogen
- B. chlorine
- C. oxygen
- D. sulphur (1V) oxide

32.	The best treatment for a student who accidentally poured concentrated tetraoxosulphate(V1) acid on his skin in the laboratory is to wash he skin with A. cold water  B. sodium trioxocarbondioxide solution  C. Iodine solution  D. Sodium triocarbonate (1V) solution.	41. A.	Which of the following compounds will give precipitate with an aqueous ammoniacal solution copper (1) chloride?  CH <sub>3</sub> CH=CHCH <sub>3</sub> B. CH <sub>3</sub> C——CCH <sub>3</sub> C. CH=C—CH <sub>2</sub> CH <sub>3</sub> D. CH <sub>2</sub> =CH-CH-=CH <sub>2</sub>				
33.	In which of the following pairs of elements is allotropy exhibited by each element?  A. Phosphorus and hydrogen B. Oxygen and chlorine C. Sulphur and nitrogen D. Oxygen and sulphur.	42. 43.	The efficiency of petrol as a fuel in high compression inetrnal combustion engines improves with an increase in the amount of  A. Branched chain alkanes B Straight chain alkanes C. Cycloalkanes D. Halogenated hydrocarbons  A palm wine seller stoppered a bottle of his palm wine				
34.	Which of the following gases can best be used for demonstrating the fountain experiment? (i) Nitrogen (ii) Ammonia (iii) Nitrogen (l)oxide (iv) Hydrogen chloride  A. (ii) and (iii) B. (i) and (iii)  C. (ii) and (iv) D. (ii) only.		in his stall and after a few hours the bottle represents the reaction that occurred?  A. $C \underset{6}{\text{H}} \underset{12}{\text{O}} \underset{6}{\text{enzymes}} 2 \underset{5}{\text{C}} \underset{1}{\text{H}} \underset{0}{\text{OH}} + 2\text{CO} \underset{2(g)}{\text{CO}}$ B. $C_2 \underset{1}{\text{H}} \underset{0}{\text{OH}}  \text{CH2} = \text{CH2}(G)) + \underset{1}{\text{H}} \underset{0}{\text{O}} \underset{2}{\text{CH}} \underset{0}{\text{O}} + \underset{0}{\text{d}} \underset{1}{\text{C}} \underset{1}{\text{C}$				
35.	<ul> <li>When calcium hydroxide us heated with ammonium tetraoxosulphate (V1), the gas given off may be collected by</li> <li>A. bubbling it through concentrated H<sub>2</sub>SO<sub>4</sub>.</li> <li>B. Bubbling it through water and then passing it through calcium oxide</li> <li>C. Passing it directly through calcium oxide</li> <li>D. Passing it directly through calcium chloride.</li> </ul>	<ul><li>44.</li><li>45.</li></ul>	ethanol reacts with aqueous sodium mono-oxoio date(1) to gives a bright yellow solid with a characteristic smell. The products is  A. trichlomethane B. ftriiodomethane C. iodoethane D. ethanal  The most volatile fraction obtained from fractional				
36.	Which of the following elements will form oxide which will dissolve both dilute HNO <sub>3</sub> and NaOH solution to form salts?  A. Cl B. Mg C. Ag D. Mn		distillation of crude petroleum contains  A. butane propane and kerosene  B. butane propane and petrol  C. ethane, methane and benzene  D. ethane methane and propane				
37.	Stainless steel is an alloy of A. iron, carbon and silver B. ironm carbon and lead C. iron, carbon and chromium D. iron and carbon only.	46. 47.	Local black soap is made by boiling palm with liquid extract of ash. The function of the ash is to provide the A. acid B. ester of alkanoic acid C. alkali D. alkanol  Synthetic rubber is made by polymerization of				
38.	Alloys are best prepared by.  A. high temperature are welding of the metals  B. electrolysis using the major metallic component as cathode  C. reducing a mixture of the oxides of the elements	48.	<ul> <li>A. 2 methyl buta-1,3-diene</li> <li>B. 2 methl buta-1, 2 – diene</li> <li>C. 2 methyl buta – 1-ene</li> <li>D. 2 methy buta –2-ene</li> <li>Complete oxidation of propan – 1 – of gives</li> </ul>				
39.	<ul><li>D. cooling a molten, mixture of the necessary elements.</li><li>Corrosion is exhibited by.</li><li>A. iron only</li></ul>		<ul><li>A. propanal</li><li>B. propan-2-L</li><li>C. propan-1-one</li><li>D. propanoic acid</li></ul>				
40.	B. electropositive metals C. metals below hydrogen in the electrochemical series D. all metals  Inspite of the electronic configuration, 1s <sup>2</sup> 2s, p2 <sup>2</sup> , carbon	49.	When water drops are added to calcium carbide in a container and the gas produced is passed called and A. oxyethylene flame B. oxyhydrocarbon flame C. oxyacetylene flame				
	<ul> <li>is tetravalent because</li> <li>A. the electrons in both 2s and 2p orbital have equal energy</li> <li>B. the electrons in both 2s and 2p orbital are equivalent</li> <li>C. both the 2s and 2p orbital hybridize</li> <li>D. the six orbital hybridize to four.</li> </ul>	50.	D. oxymethane flame.  The structure of benzoic acid is.				

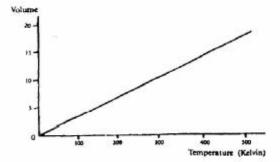

- In the experiment above, ammonium chloride crystals deposit on the walls of the tube is as a result of
  - A. Evaporation
  - B. Recrystallization
  - C. Sublimation
  - D. Fractional precipitation.
- 2. The formula of the compound formed in a reaction between a trivalent metal M and a tetravalent non-metal X is.
  - A. MX
- B.
- C.  $M_4X_3$
- D.  $M_2^3$
- 3. 2.25 g of sample of an oxide of a copper. 2.50 g of another oxide of Copper on reduction also gave 2.0 g of copper. These results are in accordance with the law of
  - A. constant composition
  - B. conversation of matter
  - C. multiple proportions
  - D. definite proportions.
- 4. One role of propane is mixed with five moles of oxygen.

  The mixture is ignited and the propane burns completely.

  What is the volume of the products at soap?
  - A.  $112.0 \text{ dm}^3$
- B. 67.2 dm<sup>3</sup>
- C.  $56.0 \text{ dm}^3$
- D. 44.8 dm<sup>3</sup>
- $[G.M.V = 22.4 dm^3 mol^{-1}]$
- 5. 0.9 dm³ of a gas at s. t. p was subjected by means of a movable piston to two times the original pressure with the temperature being now kept at 364 K. What is the volume of the gas in dm³ at this pressure?
  - A. 2.0 C. 6.0
- B. 4.5 D. 8.3

6.

Which of the gas laws does the above graph illustrate?

- A. Boyle B. Charles C. Graham D. Gay-lussac
- 7, An increase in temperature causes an increase in the pressure in the
  - A. average velocity of the molecules
  - B. number of collisions between the molecules
  - C. density of the molecules
  - D. free mean path between each molecules and other.
- 8. The forces holding naphthalene crystal together can be overcome when naphthalene is heated to a temperature of 354 K resulting in the crystals melting. These forces are known as.
  - A. coulombic B.
  - C. covalent D. van der waals
- 9. A metallic ion  $X^{2+}$  with an inert gas structure contain 18 electrons. How many protons are there in this ion?
  - A. 20
- B. 18
- C. 16
- D. 2

ionic

- 10. Which of the following physically properties decreases across the periodic table.
  - A. Ionization potential
  - B. Electron affinity
  - C. Electronegativity
  - D. Atomic radius
- 11. What are the possible oxidation numbers for an element if its atomic is 17?
  - A. -1 and 7
- B. 1 and 6
- C. 3 and 5
- D. 2 and 6
- 12. The energy change accompanying the addition of an electron to a gaseous atom is called
  - A. first ionization energy
  - B. second ionization energy
  - C. electron affinity
  - D. electronegativity
- 13. The molar ratio of oxygen to nitrogen in dissolved air is 2:1 whereas the ratio is 4:1 in atmospherics air because
  - A. nitrogen is less soluble than oxygen
  - B. oxygen is heavier than nitrogen
  - C. nitrogen has a higher partial than pressure in air
  - D. gases are hydrated in water.
- 14. An eruption polluted an environment with a gas suspected to H<sub>2</sub>S, a poisonous gas. A rescue team should spray the environment with
  - A. water
  - B. moist SO<sub>2</sub>
  - C. acidified KmnO<sub>4</sub> andwater
  - D. water, acidified KnnO<sub>4</sub> and oxygen.

15.	1.34 g of hydrated sodium tetraoxosulphate (V1) was
	heated to give an anhydrous salt weighing 0.71g. The
	formula of the hydrated salt

Na,SO,.7H,O A.

B. Na,SO,3H,O

C. Na,SO,.2H,O

Na,SO<sub>4</sub>.H,O. D.

[Na = 23, S = 32, O = 16, H=1].

16. The ion that may be assumed to have negligible concentration in a sample of water that lathers readily with soap is

> $Mg^{2+}$ A.

B.  $K^+$ 

C.

D. HCO,

17. A substance S is isomorphous with another substance R. When a tiny crystal of R,

> S dissolves in the solution A.

B. Crystals of R are precipitated

C. There is no observable change

D. R and S react to the generate heat.

18. Which of the following dilute solutions has the lowest pH value?

> Calcium trioxocarbonate(1V) A.

В Sodium trioxocarbonate(1V)

D. hydrochloric acid

E. ethanoic acid

19. Which of the following in aqueous solution neutralize litmus?

> A. NH,C1

B. Na,CO,

C. FeCl, D. NaCl.

What volume of a 0.1 M H<sub>2</sub>PO will be required to 20. neutralize 45.0cm<sup>3</sup> of a 0.2 M NaOH?

> $10.0\,{\rm cm}^3$ A.

B. 20.0 cm<sup>3</sup>

C.  $27.0 \, \text{cm}^3$  D.  $30.0 \text{cm}^3$ 

21. Which of the following substances is a basic salt?

> Na,CO, A.

B. Mg(OH)Cl

C. NaCHO.

D. K<sub>2</sub>SO<sub>4</sub>.Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.24H<sub>2</sub>O.

22. Which of the following acts both as reducing and an oxidizing agent?

A.

H<sub>2</sub>

B.

C. H<sub>2</sub>S

SO, D.

23. Which of the following reactions takes place in the cathode compartment during the electrolysis of copper (11) chloride solution?

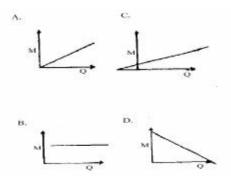

> $Cu^{2+}_{(aq)} + 2e \longrightarrow Cu(s)$ A.

B.

C.

 $\begin{array}{c} 2Cl-2e \longrightarrow Cl_2 \\ Cu(s)-2e \longrightarrow Cu^{2+}_{(aq)} \\ Cu^{2+}_{(aq)} + 2Cl_{\stackrel{(aq)}{=}} CuCl_{2(aq)} \end{array}$ D.

24. The mass of a substance, M liberated at an electrode during electrolysis is proportional to the quantity of electricity. G passing through the electrolyte. This is represented graphically by.

25. A mixture of starch solution and potassium iodide was placed in a test tube. On adding dilute tetraoxosulphate (V1) acid and then K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> solutions, a blue-black colour was produced. In this reaction, the

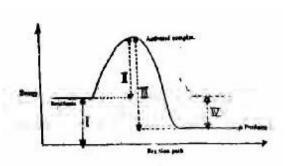

> iodine ion isoxidized A.

B. tetraoxosulphate(V1) acid acts as an oxidizing

C. starch has been oxidized

D.  $K_2Cr_2O_7$  is oxidized.

26.

Which of the following statements is TRUE?

The dissolution of NaOH<sub>(s)</sub> in water is A. endothermic

B. The heat of solution of NaOH<sub>(s)</sub> is positive

C. The NaOH<sub>(s)</sub> gains heat from the surroundings.

D. The heat of solution of NaOH<sub>(s)</sub> is negative.

28. Which of the following will produced the greatest increase in the rate of the chemical reaction represented by the equation

 $Na_{2}S_{2}O_{3(aq)} + 2HCl_{(a \to q)} 2NaCl_{(aq)} + H_{2}O_{(1)} + SO_{2(g)} + S_{(s)}?$ 

decrease in temperature and an in increase in the concentration of the reactants

B. An increase in the temperature and a decrease in the concentration of the reactants

C. An increase in the temperature and an increase in the concentrations of the reactants

D. A decrease in the temperature and a decrease in the concentration of the reactants.

29. Which property of reversible reaction is affected by a catalyst?

A. heat content(enthalpy)

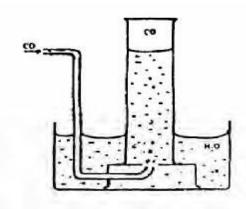

B. energy of activation

C. free energy change

D. equilibrium position.

- 30. Which of the following is used in fire extinguishers?
  - Carbon (11) oxide A.
  - B. Carbon (1V) oxide
  - C. Sulphur (1V) oxide
  - D. Ammonia
- 31. When H<sub>2</sub>S gas is passed into a solution of iron (111) chloride, the colour changes from yellow to green. This is because.
  - H<sub>2</sub>S is reduced to S A.
  - B. Fe<sup>3+</sup> ions are oxidized by H<sub>2</sub>S
  - C. H<sub>2</sub>S ions are oxidized by Fe<sup>3+</sup>
  - D. Fe<sup>3+</sup> ions are reduced to Fe<sup>3+</sup> ions

32.

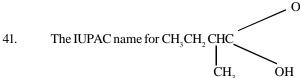

Carbon (11) oxide may be collected as shown above because it

- A. is heavier than air
- B. is less dense than air
- C. is insoluble in water
- D. burns in oxygen to form carbon(1V)oxide.
- In the reaction  $C_5H_{10}O_{\overline{5(s)}} + 5H_2O$  concentrated 33. H<sub>2</sub>SO<sub>4</sub> is acting as
  - a reducing agent A.
  - B. an oxidizing agent
  - C. a dehydrating agent
  - D. a catalyst
- 34. Suitable regents for the laboratory preparation of nitrogen are
  - sodium trioxonirate (lll) and ammonium A. chloride
  - B. sodium trioxonirate(V) and ammonium chloride
  - C. sodium chloride and ammonium trioxonirate (V)
  - D. sodium chloride and ammonium trioxonirate(lll)
- 35. The thermal decomposition of copper (ll) trioxonirate (V) yields copper (ll) oxide, oxygen and
  - A. nitrogen (ll) oxide
  - B. nitrogen(ll) oxide
  - C. nitrogen (IV) oxide
  - D. nitrogen
- Chlorine is produced commercially by 36.
  - electrolysis of dilute hydrochloric acid A.
  - B. electrolysis of brine
  - C. neutralization of hydrogen chlorine
  - D. heating potassium triox ochlorate(V)

- 37. Which of the following is used in the manufacture of glass?
  - Sodium chlorine A.
  - B. Sodium trioxocarbonate(IV)
  - C. Sodium tetraoxosulphate (VI)
  - D. Sodium trioxonirate(V)
- 38. Aluminium is extracted commercially from its ore by
  - A. heating aluminium oxide with coke in a furnace
  - B. the electrolysis of fused aluminium oxide in crvolite
  - C. treating cryolite with sodium hydroxide solution under pressure
  - D. heating sodium aluminium silicate to a high temperature.
- 39. Given the reactions

$$\begin{array}{c} \text{(i) Fe}_{(s)} + \text{(NO3)}_{2(aq)} \xrightarrow{} \text{Fe}(\text{NO}_3)_{2(aq)} + X_{(s)} \\ \text{(ii) H2}_{(g)} + \text{XO}_{(s)} \xrightarrow{} X_{(s)} + \underset{2}{\text{$\text{O}_{(g)}$}} X \text{ is likely to be.} \end{array}$$

- copper A.
- C. calcium D. lead.
- 40. Crude copper can be purified by the electrolysis of CuSO4<sub>(aq)</sub> if
  - platinum electrodes are used A.
  - B. the crude copper is made the anode of the cell
  - C. the crude copper is made the cathode of the
  - D. crude copper electrodes are used.

- 2 methylbutanoic acid A.
- B. 2 – methyl - -hydrosyketone
- C. 2 – methyl - - hydroxyl baldheaded
- D. 2 - methylpentanoic acid
- 43. Alkanoates are formed by the reaction of alkanoic acids with
  - A. alkyl halides
- B. alkanols

- C. ethers
- D. sodium
- 44. The acidic hydrogen in the compound

- 5 A. B. 4 C. 3 D. 2
- 45. The four classes of hydrocarbons are
  - ethane, ethene ethyne and benzene A.
  - B. alkanes, alkenesm alkynes and aromatics
  - C. alkanes, alkenes, alkynes and benzene
  - D. methane, ethane, propane and butane
- Alkanes 400-700°C smaller + alkanes +hydrogen. The 46.
  - above reaction is known as
    - **Photolysis** B. Cracking A.
    - C. D. Reforming. Isomerization

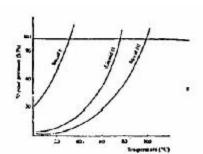

- 47. In the reaction  $2(C_6H_{10}O_5)$  n + nH<sub>2</sub>O $\longrightarrow$ nC<sub>12</sub>H<sub>22</sub>O<sub>11</sub> diastase is functioning as
  - a dehydrating agent A.
  - B. a reducing agent
  - C. an oxidizing agent
  - D. a catalyst.
- 48. 48. which of the following compounds has the highest boiling point?
  - CH, CH, CH, CH, OH A.
  - B. CH, CH, CH, CHO
  - C. CH, CH2 CH, CH,
  - D. CH, CH, OCH, CH,

- 49. Detergents have the general formula
  - R(CH,)NOH A.
  - B. RSO, Na+
  - C. RCO, Na+
  - RCO,H D.
- 50. What process would coal undergo to give coal gas, coal tar, ammoniac liquor and coke?
  - steam distillation A.
  - B. Destructive distillation
  - C. Liquefaction,
  - D. Hydrolysis.

8.

- 1. Which of the following would support the conclusion that a solid sample is mixture?
  - The solid can be ground to a fine powder A.
  - B. The density of the solid is 2.25 g dm<sup>3</sup>
  - C. The solid has a melting range of 300°C to 375°C.
  - D. The solid of the moisture from the atmosphere.
- 2. The molar of carbon to hydrogen of volatile liquid compound is 1:2. 0.12 g of the liquid evaporation at s.t.p gave 32 cm3 of vapour. The molecular formula of the liquids is A. CH
  - C C'H'
- B. C⁴Ĥ D.
- [G.M.V = 22.4 DM3, C=12, H=1]

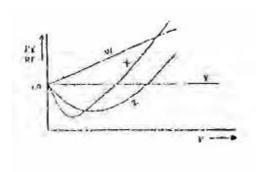

3.

It can be deduced from the vapour of pressure curves above that.

- A. liquid has the highest boiling point
- B. liquid has the highest boiling point
- C. liquid Ill has the highest boiling point
- D. liquid lll has the lowest boiling point.
- 4. 20.00 cm3 of a solution containing 0.53 g of anhydrous Na<sub>2</sub>CO<sub>2</sub> in 100 cm3 requires 25.00 cm3 of H<sub>2</sub>SO<sub>4</sub>for complete neutralization. The concentration of the acid solution in moles per dm3 is
  - A. 0.02  $\mathbf{C}$
- В 0.04
- D. 0.06
- 0.08 [H=1, C=12, 0=16, Na=23, S=32]

- 5. The minimum volume of oxygen required for the complete combustion of mixture of 10cm3 of CO and 15 cm3 of H<sub>2</sub> is
  - A.  $25.0 \, \text{cm}^3$
  - В  $12.5 \text{ cm}^3$
  - C  $10.0 \, \text{cm}^3$
  - D  $5.0\,\mathrm{cm}^3$
- 6. What is the partial pressure of hydrogen gas collected over water at standard atmospheric pressure and 25oC if the saturation vapour pressure of water is 23 mm Hg at that temperature?.
  - A. 737 mm Hg
- B. 763 mmHg
- C. 777 mm Hg
- D. 737 mmHg
- 7. The atomic radius Li, Na and K are 1:33 Am 1.54A and 1.96A respectively. Which of the following explain this gradation in atomic radius?
  - Electropositivity decreases from Li to Na to K A.
  - B. Electronegativity decreases from Li to Na to
  - C. The number of electron shells increase from Li to Ma to K
  - D. The elements are in the same period.

Which of the curves in the above graph illustrates the behaviors of an ideal gas?

- W A. Y
- B. X  $\mathbf{Z}$
- C.
- D.

Elements X and Y have electronic configurations 9.  $1s^22s^22p^4$  and  $1s^22s^22p^63s^23p^1$  respectively. When they combine, the formula of the compound formed is

> A. XYC.

X,Y

B. YX

D.  $Y_{2}X_{3}$ 

10. The atomic number of cesium is 55 and its atomic mass is 133. The nucleus of cesium atom therefore contains

78 protons and 55 electrons

55 protons and 78 neutrons B.

C. 55 neutrons and 78 electrons

D. 78 neutron and 55 neutrons

11. Four elements P,Q,R and S have atomic numbers of 4, 10, 12, and 14 respectively. Which of these elements is a noble gas?

P A.

B.

C. R

Q S D.

12. How many valence electrons are contained in the element represented by <sup>31</sup> P?

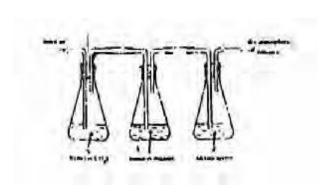

> 3 A.

B. 5

C. 15

31 D.

13.

In the above set up, substances X and Y are respectively.

Lime water and copper (ll)tetraoxosulphate A. (VI)

B. Potassium trioxocarbonate(IV) and alkaline prygallol

C. Potassium hydroxide and alkaline pyrogallo

D. Potassium trioxocarbonate (1V) and concerntrate tetraoxosulphate (VI) aid

The gaseous pollutant sulphur (IV) oxide is most likely 14. to be detected in fairly reasonable quantities in the area around a plant for the

extraction of aluminium from bauxite A.

B. production of margarine

C. smelting of copper

production of chlorine from brine D.

15. Calcium hydroxide is added in the treatment of town water supply to

> kill bacteria in the water A.

B. facilitate coagulation of organic particles

C. facilitate sedimentation

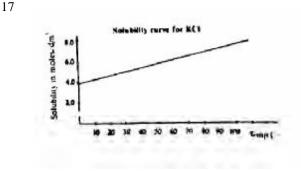

improve the tase of the water. D.

A hydrated salt of formula MSO<sub>4</sub>:XH<sub>2</sub>O contains 45.3% 16. by mass of the water of crystallization.

Calculate the value of X.

A. 3 B. 10

C. 7 D. [M = 56, S = 32, O = 16, H = 1]

If the graph above 1 dm<sup>3</sup> of a saturated solution of HCI is cooled from 80°C, the mass of crystals deposited will be.

A. C.

7.45 g 74.50 g

14.90 g В.

149.00 g D. [K = 39, Cl = 35.5]

Using 50cm3 of 1 M potassium hydroxide and 100cm3 18. of 1M tetraoxosulphate(VI) acid, calculate the respective volumes in cm3 of bade and acid 100 cm3 of base and acid that would be required to produce the maximum amount of potassium tetraoxosulphate(VI)

> A. 50,50 C. 50,25

25,50 D. 25,25

[K = 39, S = 32, O = 16, H = 1]

A solution of calcium bromide contains 20 g dm<sup>3</sup> 19. What is the molarity of the solution with respect to calcium bromide and bromide ions?

> 0.1,0.1 A. C. 0.1,0.05

B. 0.1,0.2

D. 0.05,0.1 [Ca = 40, Br = 80]

20. The substance of ZnO dissolves in sodium hydroxide solution and mineral acid solution to gives soluble products in each case. ZnO is therefore referred to as.

an allotropic acid A.

an atmopheric oxide В.

C. a peroxide

a dioxide. D.

21. An acid its conjugate base .

> can neutralize each other to form a salt A.

В. differ only by a proton

differ only by the opposite charges they carry C.

are always neutral substances D.

22. The same current is passed for the same time through solutions of AgNO3 and CuSO4 connected in series. How much silver will be deposited if 1.0 g of copper is produced?

> A. 1.7 g $6.8\,\mathrm{g}$

B.  $3.4\,\mathrm{g}$ D. 13. 6 g

[Cu = 63.5, S = 32, O = 16M Ag = 108, N = 14]

- 23. What is discharged at the cathode during the electrolysis of copper (ll) tetraoxosulphate (Vl) solution?
  - Cu<sup>2+</sup> only A.

-2

B. H+ only

-5

- C.
- Cu, and H+
- Cu2+ and SO2-
- 24. An element, Z forms an anion whose formula is  $[Z(CN)]^y$ . If has an oxidation number of +2, what is the value of y?
  - A. C.
- B.
- D.
- 25. Which of the reaction is NOT an example of a redox reaction?

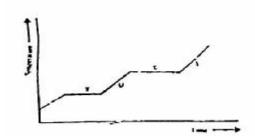

$$\begin{array}{c} \text{I Fe} + 2\text{Ag}^+ \longrightarrow \text{Fe}^{2+} + 2\text{Ag} + \\ \text{II } 2\text{H}_2\text{S} + \text{SO}_2 \longrightarrow 2\text{H}_2\text{O} + 3\text{S} \\ \text{III N}_2 + \text{O} \longrightarrow 2\text{NO} \\ \text{IV CaCO}_3 \longleftrightarrow \text{CaO} + \text{CO}_2 \end{array}$$

- A. I, II, III
- B. II and III
- C. III and IV
- D. IV only.

- -2792 A.
- B. +2792
- C. -64
- D. +64
- $CO(g) + H_2O CO_2(g) + H_2(g) H = -41000 J. Which$ 28. of the following factors favour the formation of hydrogen in the above reaction? I high pressure II low pressure III high temperature IV use of excess steam
  - I, III, and IV A.
- B. III only
- C. II, III and I
- D. Iv only.

29.

The above graph shows a typical heating curve from the solid phase through the liquid phase to the gaseous phase of a substance. What part of the curve shows solid and liquid in equilibrium? Т

A.

- C. X
- U D Y
- 30. Which of the following represents the balanced equation for the reaction of copper with concentrated trioxonirate (V) acid?
  - A.
  - $\begin{array}{c}
    \text{all } (V) \text{ a. i.} \\
    2\text{NHO}_{3(\text{aq})} \longrightarrow \text{Cu(NO}_{3})_{2(\text{aq})} + \text{H}_{2(\text{g})} \\
    \text{Cu}_{(\text{s})} + 4\text{HNO}_{3} \longrightarrow \text{Cu(NO}_{3})_{2(\text{aq})} + 2\text{H}_{2}\text{O}_{(\text{l})} + \\
    \end{array}$ B.
  - $2N\overset{O}{O}_{2(g)} \\ 3Cu_{(s)}^{} + 8HNO_{3(aq)} \longrightarrow 3Cu(NO_{3})_{2(aq)} + 4H_{2}O_{(l)}$ C.
  - $+ 2 \overset{\smile}{NO}_{(g)} \\ 3 \overset{\smile}{Cu}_{(s)} + 4 \ HNO_{3\overline{(aq)}} \rightarrow 3 \overset{\smile}{Cu}(NO_3)_{2(aq)} + 2 \overset{\smile}{H_2O}_{(l)} +$ D.
- The above diagram gives the potential energy profile of the catalyzed uncatalysed reactions of
- XY(g). Deduce the respective activation energies in kJ of the catalyzed and uncatalysed reverse reactions.
- $XY(g) + X(g) \longrightarrow X(g) + Y(g)$
- 300,500 A.

26.

- 500,300 B.
- C. -300, -500
- D. -5000.
- 27. The combustion of ethene, C2H2, is given by the equation  $C_1H_2 \rightarrow 2CO_3 + 2H_2O_3$ : H = -1428 kJ. If the molar heats of formation of water and carbon (1) oxide are -286kJ

- 31. The catalyst used in the contact process for the manufacture of tetraoxosulphate(VI) acid is
- Manganese (IV) oxide A.
  - Manganese (11) tetraoxosulphate (1V) B.
  - C. Vanadium (V) oxide
  - D. Iron metal
- 32. Some products of destructive distillation of coal are
  - carbon (iV) oxide and ethanoic acid A.
  - B. trioxocarbonate (IV) acid and methanoic acid
  - C. producer gas and water gas
  - D. coke and ammonialiquor
- 33. Gunpowder is made from charcoal, sulphur and potassium trioxonirate (V). The salt in the mixture performs the function of
  - an oxidant A.
- В. a reductant
- C. a solvent
- D. a catalyst

- 35. Bleaching powder, CaOCl2.H2O, deteriorates on exposure to air because
  - A. it loses its water of crystallization
  - B. atmospheric nitrogen displaces chlorine from it

D.

Ill and IV

- C. carbon (IV) oxide of the atmosphere displaces chlorine fromit
- D. bleaching agents should be stored in solution
- 36. The product of the thermal decomposition of ammonium trioxonirate (V) are.
  - A. NO<sub>2</sub> and oxygen

I and III

C

- B. NH<sub>3</sub> and oxygen
- C. nitrogen and water
- D. N<sub>2</sub>O and water.
- 37. The scale of a chemical balance is made of iron plate and coated with copper electrolytically because.
  - A. iron is less susceptible to corrosion than copper
  - B. copper is less susceptible corrosion as ion
  - C. copper is less susceptible to corrosion than ion
  - D. copper and ion are equally susceptible to corrosion.
- 38. A metal is extracted for, its ore by the electrolysis of tits molten chlorine and it displace lead from lead (ll) trioxonirate(V) solution. The metal is

A. copper

B. aluminium

C. zinc

D. sodium

- Mortar is NOT used for under-water construction because.
  - A. It hardens by loss of water
  - B. Its hardening does not depent upon evaporation
  - D. It requires concrete to harden
  - E. It will be washed away by the flow of water.
- 40. Which of the following is NOT involved in the extraction of metals from their ores?
  - A. reduction with carbon
  - B. reduction with other metals
  - C. reduction by electrolysis
  - D. oxidation with oxidizing agent.
- Which of the following compounds is an isomer of the compound.
- A. CH-CH<sub>2</sub>-CH-CH<sub>2</sub>-CH<sub>3</sub> CH<sub>3</sub>

B. CH-CH<sub>2</sub>-CH<sub>-</sub>CH<sub>3</sub>-CH<sub>3</sub>

C. CH-CH<sub>2</sub>-GH-CH<sub>3</sub> C<sub>2</sub>H<sub>5</sub>

D. CH<sub>3</sub>-CH<sub>1</sub>CH<sub>2</sub>-CH<sub>3</sub> CH<sub>3</sub> 42. When excess chlorine is mixed with ethene at room temperature, the product is

A. 1,2 – dichloroethane

B. 1,2 – dichloroethene

C. 1, 1- dichloroethane

D. 1. 1-dichloroethene.

43. Vulcanization of rubber is a process by which

A. Isoprene units are joined to produce rubber

B. Rubber latex is coagulated

C. Sulphur is chemically combined in the rubber

D. Water is removed from the rubber.

44. The reaction between ethanoic acid and sodium hydroxide is an example of

A. esterification

B. neutralization

C. hydrosylation

D. hydrolysis

45. The bond which joins two ethanoic acid molecules in the liquid state is

A. a covalent bond

B. an ionic bond

C. a dative covalent bond

D. a hydrogen bond

46. The alkaline hydrolysis of fats and oils produces soap and

A. propane 1, 1, 3-triol

B. propane - 1, 3, 3-triol

C. propane-1-2-2-triol

D. propane-1-2-3-triol

47. which of the following is NOT a monomer?

A.

B.  $CH_{2} = CH_{2}$ 

D.  $CH_2 = CHC1$ 

48. What is the IUPAC name for the compound

$$CH_{2} = C$$

$$CH_{2}CI$$

A. 1-chloro-2-methylprop-2, 3-ene

B. 1-chloro-2-methlprop-2-ene

C. 3-chloro-2-methylprop-1-ene

D. 3-chloro-2-methyprop-1,2-ene

49. The gas responsible for most of the fatal explosion in coal mines is

A. butane

B. ethene

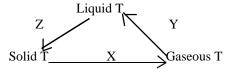

C. ethane

D. methane

- 50. Three liquids X,Y and Z containing only hydrogen and carbon were burnt on a spoon, X and Y burnt with sooty flames while Z did not. Y is able to discharge the colour of bromine water whereas X and Z cannot. Which of the liquids would be aromatic in nature?
  - $\boldsymbol{X}$  and  $\boldsymbol{Z}$ A.
- Y B.
- C. X
- Z D.

[G.M.V at s.t.p =  $22.40 \text{ dm}^3$ ]

- 1. Which of the following is a physical change?
  - The bubbling of chlorine into water A.
  - The bubbling of chlorine into jar containing B. hydrogen
  - C. The dissolution of sodium chlorine in water
  - D. The passing of steam over heated iron.
- 2. Changes in the physical states of chemical substances T are shown in the scheme below.

The letters X, Y and Z respectively represent

- A. sublimation, condensation and freezing
- B. sublimation, vaporization and solidification
- C. freezing, condensation and sublimation
- D. evaporation, liquefaction and sublimation.
- 3. In the reaction:  $SnO_2 + 2C - Sn + 2CO$  the mass of coke containing 80% carbon required to reduce 0.032 kg of pure tin oxide is
  - 0.40 kgA.
- B. 0.20 kg
- C. 0.06 kgD.  $0.40\,\mathrm{g}$

[Sn = 119, O = 16, C = 12]

- The Avogadro's number of 24 of magnesium is same as 4. that of
  - 1 g of hydrogen molecules A.
  - 16 g of oxygen molecules B.
  - C. 32 g of oxygen molecules
  - 35.5 of chlorine molecules. D.
- 5. If a gas occupies a container of volume 146 cm3 at 18°C and 0.971 atm, its volume on cm3 at s.t.p is
  - 133 A.
- В. 146
- C. 266
- 292 D.
- The volume occupied by 1.58 g of gas s.t.p is 500 cm<sup>3</sup>. 6. What is the relative molecule mass of the gas?
  - A. 28

B.

C. 344

32 D. 71

- 7. Equal volumes of CO, SO, NO, and H,S, were released into a room at the same point and time. Which of the following gives the order of the room?
  - CO,, SO,, NO, H,S, A.
  - B.  $SO_2$ ,  $NO_2$ ,  $H_2S$ , CO
  - C. CO, H,S, SO,, NO,
  - D. CO, H,S, NO, SO,

[S = 32, C=12, 0=16, N = 14, H = 1]

- 8. A basic postulate of the kinetic theory of gases is that the molecules of a gas move in straight lines between collisions. This implies that.
  - collisions are perfectly elastics A.
    - B. forces of repulsion exist
    - C. forces of repulsion and attraction are in equilibrium
    - D. collisions are inelastic.

		P	Q	R	S
9.	Proton	13	16	17	19
	Electron	13	16	17	19
	Neutron	14	16	35	20

Which of the four atoms P,Q,R and S in the above data can be described by the following properties: relative atomic mass is greater than 30 but less than 40; it has an odd atomic number and forms a unipositive ion in solution?

- A. P C. R
- B. Q S D.
- 10. Which of the following terms indicates the number of bonds that can be formed by atom?
  - A. Oxidation number
  - B. Valence
  - C. Atomic number
  - D. Electronegativity.
- $\sum$   $X_{(g)}$ . The type of energy involved in the 11. above transformation is
  - ionization energy A.
  - B. sublimation energy
  - C. lattice energy
  - D. electron affinity

12.	35 and	l 37, has an atom	ic of 35.5. T	ope of mass numbers The relative abundance	20.	What is concentration of H <sup>+</sup> ions in moles per dm <sup>3</sup> of a solution of pH4.398?					
	of the	isotope of mass	number 37	is.		A.	$4.0 \times 10^{-5}$	B.	0.4 x	10-5

Melts at a low temperature.

raising the temperature

The above reaction is an example of

- displacement reaction
  - a neutralization reaction B.
  - C. an elimination reaction
  - D. Saponification
- 47. Alkanoic acids have low volatility compared with Alkanoic because they
  - A. are morepolar than alkanols
  - В have two oxygen atoms while alkanols have
  - C. form two hydrogen bonds while alkanols donot
  - D. form two hydrogen bonds while alkanols form one.
- 48. The octane number of a fuel whose performance is the same as that of a mixture of 55 g of 2, 2, 4-trimethyl pentane and 45 g of n-heptanes is
  - 45 A. C. 80
- 55 D. 100
- 49. Which of the following is formed when maltose reacts with concentrated tetraoxosulphate (VI)acid.
  - A. Carbon (IV) oxixde
  - B. Coal tar
  - C. Charcoal
  - Toxic fumes D.

50. Which of the following compounds represents the polymerization product of ethyne?

A..

B.

C.

D.

## Chemistry 1991

- 1. Which of the following can be obtained by fraction of distillation?
  - A. Nitrogen from liquidair
  - B. Sodium chloride for sea water
  - C. Iodine from a solution of iodine in carbon tetrachloride
  - D. Sulphur from a solution of sulphur in carbon disulphide.
- 2. Which of the following are mixture? I Petroleum ii Rubber latex. Iii Vulcanizes' solution. Iv Carbon (11) sulphides
  - A. I, ii and iii
  - B. I, ii and iv
  - C. I and ii only
  - D. I and iv
- 3. Anironoreisknowntocontain 70.0% FeO. The mass

of iron metal which can theorically be obtained from 80kg of the ore is.

- A. 35.0kg
- B. 39.2 kg
- C. 70.0kg
- 78.4 kg D.
- [Fe = 356, O = 16]

- 4. In two separate experiments 0.36 g and 0.71 g of chlorine combine with a metal X to give Y and Z respectively. An analysis showed that Y and Z contain 0.20 g and 0.40 g of X respectively. The data above represents the law of.
  - A. multiple proportion
  - B. conversation of mass
  - C. constant composition
  - D. reciprocal proportion.
- 5. 30cm<sup>3</sup> of oxygen at 10 atmosphere pressure is placed in a 20 dm<sup>3</sup> container. Calculate the new pressure it temperature is kept constant.
  - 6.7 atm A.
- 15.0atm B.
- C. 6.0 atm
- D. 66.0atm
- A given quantity of gas occupies a volume of 228 cm<sup>3</sup> 6. at a pressure of 750 mm Hg. What will be its volume at atmospheric pressure?
  - 200cm<sup>3</sup> A.
- B. 225 cm<sup>3</sup>
- C. 230 cm<sup>3</sup>
- D.  $235 \text{ cm}^{3}$

	trioxocarb	onate (iV) is to	tally dec	composed by heat.

Carbon (IV) oxide and sulphur (1V) oxide

D.

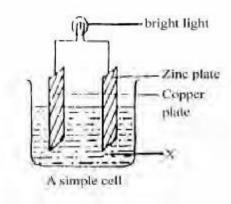

15.

7.

Calculate the volume of carbon (lv) oxide measure at s.t.p,

produced when 1 kg of potassium hydrogen

21.

Which of the following substances could be satisfactorily used as X in the above figure?

- Ammonia and Potassium hydroxide A.
- B. Potassium hydroxide and sodium chloride
- C. Ammonia and ethanoic acid
- D. Ethanoic and sodium chloride
- What volume of CO<sub>2</sub> at s.t.p would be obtained by 22. reacting 10cm<sup>3</sup> of 0.1 M solution of anhydrous sodium trioxocarbonate (IV) with excess acid?

A. 2.240 cm. C. 224.0 cm<sub>3</sub>

22.40 cm D. 2240 cm,

 $[G.M.V \text{ at s.t.p} = 22.4 \text{ dm}_3]$ 

23. If a current of 1.5 A is passed for 4.00 hours through a molten tin salt and 13.3 g of tins is deposited, What is the oxidation state of the metal in the salt?

A. 1 C. 3 B. 4 D.

 $[Sn = 118.7, F = 96500 \text{ C mol}^{-1}]$ 

- 24. Which of the following equivocal solutions, Na<sub>2</sub>CO<sub>3</sub>, Na, SO<sub>4</sub>, FeCl<sub>2</sub>, NH<sub>4</sub>Cl and CH<sub>2</sub> COONa, have pH greater than?
  - A. FeCl, and NH,Cl
  - B. Na,CO, CH, COONa and Na,SO,
  - C. Na,CO, and CH, COONa
  - D. FeCl<sub>3</sub>, CH<sub>3</sub> COONa. NH<sub>4</sub>Cl
- 25.  $MnO_4^- + 8H^+ + ne \rightarrow M^{++} + 4H_2O$ . Which is the value of n the reaction above?

A.

3

2 C.

5 D.

- $2H_{2(g)} + SO_{2(g)} \longrightarrow 3S_{(s)} + 2H_2O_{(1)}$ . The above reaction is A. a redox reaction in which  $H_2S$  is the oxidant and 26. SO, is the reductant.
  - B. a redox reaction in which SO<sub>2</sub> is the oxidant and H<sub>2</sub>S is the reductant.
  - C. Not a redox reaction because there is no oxidant in the reaction equation
  - Not a redox reaction because there is no reductant in the reaction equation.
- 27. Manganese(IV) oxide is known to hasten the decomposition of hydrogen peroxide. Its main actions is to.
  - A. increase the surface area of the reactants
  - B. increase the concentration of the reactants

- C. lower the activation energy for the reaction
- D. lower the heat of reaction. H. for the reaction.
- 28. 1.1 g of CaCl dissolved in 50 cm<sup>3</sup> of water caused a rise in temperature of 34°C. The heat reaction, H for CaCl in kJ per moles is

A. -71.1 -4.18

C. +17.1 D. +111.0

[Ca = 40, Cl = 35.5, specific heat of water is 4.18 KJ<sup>-1</sup>]

29. NO + CO 
$$\stackrel{}{\sim}$$
 1/2 N<sub>2</sub> + CO<sub>2</sub>  $\stackrel{}{\checkmark}$  H = -89.3kJ

.What conditions would favour maximum conversion of nitrogen (ll) oxide and carbon(ll) oxide in the reaction

- A. low temperature and high pressure
- B. high temperature and low pressure
- C. high temperature and high pressure
- D. low temperature and low pressure.
- 30. Which of the following equilibria is unaffected by a pressure change?

A.  $2NaCl \longleftrightarrow 2Na + Cl_{3}$ 

 $H_3 + I_3 \Leftrightarrow 2HI$ В.

20, →30, C.

 $2NO_{s} \leftarrow N_{s}O_{s}$ D.

31.

Initial concentration of no in moles	Initial Rate (moles / sec)
0.001	3.0 x 10 <sup>-5</sup>
0.002	1.2 x 10 <sup>-4</sup>

The data in the table above shows the rate of reaction of nitrogen (II) oxide with chlorine at 25°C. It can be concluded that doubling the intial concentration of NO increase the rate of reaction by factor of

A. two C. four

B. three D. five

32. Which of the following gases will rekindle a brightly glowing splint?

> A. NO.

NO B.

- C. N,O
- D. Cl,
- 33. Which of the following salts can be melted without decomposition?

Na,CO, A. C. MgCO,

CaCO, B. D. ZnCO,

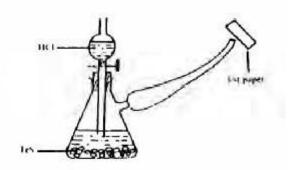

34. Oxygen gas can be prepared by heating

> ammonium trioxonirate (V) A.

> B. ammonium trioxonirate (111)

C. potassium trioxonirate (V)

D. manganese (IV) oxide.

The appropriate test paper to use in the above experiment is moist.

- A. litmus paper
- B. potassium heptaoxodichromate(1V) paper
- C. lead (11)trioxonirate (V) paper.
- D. Universal indicator paper.
- 36. Addition of aqueous ammonia to a solution of Zn<sup>++</sup> gives a white precipitate which dissolves in an excess of ammonia because.
  - A. zinc is amphoteric
  - B. zinc hydroxide is readily soluble
  - C. zinc forms a complex which is readily soluble in excess ammonia
  - D. ammonia solution is a strong base.
- 37. Which of the following, in clear solution, forms a white precipitate when carbon(1V) oxide is bubbled into it for a short time?
  - A. KOH
- B. NaOH
- C. Ca(OH),
- D. Al(OH)<sub>3</sub>
- 38. Copper (11) tetraoxosulphate (V1) is widely used as a
  - A. Fertilizer
- B. Fungicide
- C. Disinfectant
- D. Purifier
- 39. Which of the following metals can be prepared in samples by the thermal decomposition to their trioxonirate (V)salt?
  - A. Copper and mercury
  - B. Silver and copper
  - C. Mercury and silver
  - D. Magnesium and mercury
- 40. Which of the following compounds can exist as geometric isomers?
  - A. 2-methylbut2-ene
  - B. But-2-ene
  - C. But-1-ene
  - D.

- 41. How many structural isomers can be written for the alkyl bromide  $C_2H_9Br$ ?
  - A. 3 C. 6
- B. 4
- D. 8

- 42. The final products of the presence of ultraviolet light are hydrogen chloride and
  - A. chloromethane
  - B. tetrachloromethane
  - C. trichloromethane
  - D. dichloromethane
- 43. How many grams of bromine will be required to completely react with 10 g of propyne?
  - A. 20 g
- B. 40 g
- C. 60 g
- D. 80 g
- [C = 12, H = 1, Br = 80].
- 44. Ethene when passed into concentrated H<sub>2</sub>SO<sup>4</sup>is rapidly absorbed. The product is diluted with water and then warmed to produce.
  - A. ethanol
- B. diethyl ether
- C. ethanal
- D. diethyl sulphate.
- 45. One of the advantages of detergents over soap is that detergents.
  - A. are easier to manufacture
  - B. foam more than soap
  - C. form soluble salts with hard water
  - D. are able to deter germ more than soap.
- 46.  $CH_3CH_2CHCH_3$  alc.  $KOH_3CH = CHCH_3$

X CHCH + CH CH CH = CH

The above reaction is an example of

- A. dehydration
- B. dehydrohalogenation
- C. neutralization
- D. a fission reaction
- 47. A certain liquid has a high boiling point. It is viscous, non-toxic, miscible with water to be hygroscopic. This liquid is most likely to be.
  - A. CH,CH,CH,CH,OH
  - B. CH,CH,OHCH,
  - C. CH,CH,CHOHCH,
  - E. CH,OHCHOCH, OH
- 48. The compound.

CH<sub>3</sub>-CH-CH3 sCH<sub>2</sub>Cl Is known as

- A. 1-chloro-2-methylbutane
- B. 1-chloro-2-methylpronane
- C. 2-chloromethylethane
- D. 1-chloro-2,2-dimethylethane
- 49. Which of the following statements is TRUE of the complete hydrolysis of a glyceride by sodium hydroxide?
  - A. 3 moles of NaOH are required for each mole of glyceride
  - B. 3 moles of glycerol are produced
  - C. only one mole of soap is formed.
  - D. Concentrated H<sub>2</sub>SO<sub>4</sub> is essential for the completion of the reaction.

50. Which of the following are the products of the reaction between CH<sub>2</sub>COOH and Cl<sub>2</sub> in sunlight? CICH, COOH + HCI A. B. CH,COCl + HOCl C. CH, COOCI + HCI D. CH,COCl+H,O Chemistry 1992 1. Which of the following substances is not a 9. The nucleus of the isotope tritium, contains homogeneous mixture? A. two neutrons with no protons Filtered sea water B. A. one neutron and one proton C. B. Soft drink two neutron and one electron two neutron, one proton, and one electron. C. Flood water D. D. Writing ink 10. How many lone pairs of electron are there on the central 2. atom of the H<sub>2</sub>Omolecules? There is a large temperature interval between the melting point and the boiling point of a metal because. A.1 B. 2 A. metals have very high melting points C. 3 B. metals conduct heat very rapidly C. melting does not break the metallic bond but D. 4 boiling does.  $^{14}$  N + X  $\longrightarrow$   $^{17}_{8}$ O +  $^{1}_{1}$  H . In the above reaction, 11. D. the crystal lattice of metals is easily broken. A. neutron, B. Heliumatom 3. How many moles of [H<sup>+</sup>] are there in 1 dm<sup>3</sup> of 0.5 solution C. Lithium atom D. Deutrium atom of H,SO<sub>4</sub> 2.0 moles A. B. 1.0 mole C. 0.5 mole D. 0.25 mole Four elements P,Q,R and S have 1,2,3 and 7 electrons in their outermost shells respectively. The element which is 4.  $wH_2SO_4 + xA(OH)_3 \rightarrow yH_2O + zAl_2(SO4)_3$ . The unlikely to be a metal is respective values of w, x, y and z in the equation above A. P Q C. R S are D. B. A. 2,2,5 and 1 3,2,5 and 2 C. 3,2,6 and 1 D. 2,2,6 and 2 13. The pollutants that are likely to be present in an industrial environment are 5. A given mass of gas occupies 2 dm<sup>3</sup> at 300 K. At what HS, SO and oxides of nitrogen temperature will its volume be doubled keeping the B. NH<sub>2</sub>, HCl and CO C. pressure constant? CO, NH, and H,S 400 K B. D. Dust, No and Cl, A. 480 K D. C. 550 K 600 K 14. Which of the following gases dissolves in water vapour to produce acid rain during rainfall? 6. If 100 cm<sup>3</sup> of oxygen pass through a porous plug is 50 A. Oxygen seconds, the time taken for the same volume of B. Carbon (11) oxide hydrogen to pass through the same porous plug is C. Nitrogen A.  $10.0 \, s$ B. 12.5 sD. Sulphur (IV) oxide C.  $17.7 \, s$ 32.0sD. [O = 16, H = 1]15. Water for town supply is chlorinate to make it free 7. Which of the following is a measure of the average from kinetic energy of the molecules of a substance. A. bad odour A. Volume B. Mass B. bacteria C. Pressure D. Temperature C. temporary hardness D. permanent hardness. 8 An increase in temperature causes an increase in the pressure of a gas in a fixed volume due to an increase in 16. On which of the following is the solubility of a the gaseous substance dependant? 1. Nature of solvent. A. number of molecules of the gas 11. Nature of solute 11. Temperature. 1V.Pressure. B. density of the gas molecules A. 1. 11. 111 and 1V B. 1 and 11 only

C.

ll only

D.

1, lll and iV only

C

D.

number of collisions between the gas

and the walls of the container.

number of collision between the gas molecules

17.			An emulsion pa	int consis	st of	26.	In whic	h of the following is the entropy change
		A.	gas or liquid par			positiv		
		B.	liquid particles	dispersed	inliquid	_	A.	$H_2O_0 \longrightarrow H_2O(g)$
		C.	solid particles d	ispersed	in liquid		B.	$Cu^{2+}_{(aq)}^{(r)} + Fe_{(s)} \xrightarrow{Fe^{2+}_{(aq)}} + Cu_{(s)}$
		D.	solid particles d	ispersed	in solid		C.	$\begin{array}{c} H_{2}O_{(I)} \longrightarrow H_{2}O(g) \\ Cu^{2^{+}}{}_{(aq)} + Fe_{(s)} \longrightarrow Fe^{2^{+}(aq)} + Cu_{(s)} \\ N_{2(g)} + 3H_{2(g)} \longrightarrow 2NH_{3(g)} \end{array}$
							D.	$2HCl_{(s)} \rightarrow N_{2(g)} + Cl_{2(g)}$
18.			le of orange juice					
				tration of	the hydroxide ion	27.		at way is equilibrium constant for the forward
		in the ju		_				on related to that that of the reverse reaction?
		A.	$1.6 \times 10^{-4}$	В.	$6.3 \times 10^{-11}$		A.	The addition of the two is expected to be
		C.	$6.3 \times 10^{-4}$	D.	1.6x 10- <sup>11</sup>		_	one
40							B.	The product of the two is expected to be
19.			HCl, CH <sub>3</sub> COOH	I, C <sub>6</sub> H <sub>5</sub> CF	l <sub>3</sub> in order of		<b>a</b>	one
			ng conductivity.	~			C.	The two equilibrium constants are identical
		A.	HCl,CH,COOH,	C <sub>6</sub> H <sub>5</sub> CH <sub>3</sub>	r		D.	The product of the two is always greater
		B.	C,H,CH,COOH					than one.
		C. D.	C <sub>6</sub> H <sub>5</sub> CH <sub>3</sub> COOH, CH <sub>3</sub> , COOH, C <sub>6</sub> H		1	28.	Which	h of the following equilibre shows little own
		D.	$CII_3$ , $COOII$ , $C_6I$	1 <sub>5</sub> C11 <sub>3</sub> ,11C	I	28.		h of the following equilibra shows little orno action when the volume of the volume of the
20.		Which o	of these is an acid	l salt?				n is decreased?
20.		A.	$K_2SO_4A_{12}(SO_4)_3$				A.	H+ 1 ≥ 2Hl
		В.	$CuCO_3$ . $Cu(OH)_2$	241120			В.	$\begin{array}{c} H_{2(g)} + \not {\searrow} 2Hl_{(g)} \\ 2NO \not {\searrow} N_2O_{4(g)} \end{array}$

23.		Calcula	te the mass, in kil	lograms,	of magnesium		A.	It supports combustion
			d by the electroly				B.	It is strong acidic in water
		-	•		ours at 500 amperes.		C.	It is very soluble in water
		A.	2.7	В.	5.4		D.	It supports the burning of magnesium to
		C.	10.8	D.	21.7		٠.	produce magnesium oxide.
		[Farada	y = 96,500  C mm	nol <sup>-1</sup> , Mg	= 24]			1

 $MnO_2 + 2Cl^- + 4H \longrightarrow Mn^{2+} + Cl_2 + 2H_2O$ . The change

is oxidation numbers when the manganese, chlorine and hydrogen ions react according to the above

B.

D.

 $S_2O3^{2-} + I_2 \longrightarrow S_4O6^{2-} + 21.$  In the reaction above, the oxidizing agents is

-1,-24

2, 4, 0

equation are respectively.

2, 2, 4

-2, 1, 0

 $S_2O3^{2-}$ 

A.

C.

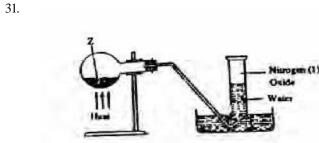

A. B.

C.

D.

24.

25.

In the experiment above, Z can be

- A. a solution of sodium dioxonitrate(lll) and ammonium chloride
- B. a solution of lead trioxonitrate(V)

39. Duralumin consists of aluminum, copper,  A. zinc and gold  B. lead and manganese C: manganese and magnesium.  C: Addition  An organic compound containing 40.1% can be defined as an empirical formula of the compound solver.  B: manganese and magnesium.  C: CH <sub>2</sub> O  D: CH <sub>2</sub> O  D: CH <sub>3</sub> O  C: CH <sub>2</sub> O  D: CH <sub>3</sub> O  Alkanals can be differentiated from alkanor reaction with.  A. dissolution  B. slackin  C. liming  D. mortaring  B. hydrogen cyanide  A. sp <sup>3</sup> hybridized  B. sp hybridized  C: Addition  D: Saponic compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1% can be defined as an empirical formula of the compound containing 40.1%		C.			xonitrate(V)and	42.		$CH_3$			
Which of the following combination of gases is used for metal welding? 1. Oxygen and ethyne. II Hydrogen and oxygen. IV Ethyne, hydrogen and oxygen. A. I and II B. III and IV C. I and III D. ## Chemistry 1993

 The dissolution of common salt in water is physical change because

A. the salt can be obtained by crystallization

- B. the salt can be recovered by the evaporation of water.
- C. Heat is not generated during mixing D. The solution willnot boil at 100°C
- 2. Which of the following substances is mixture?

A. Sulphur powderB. BronzeC. Distilled waterD. Ethanol

3. How many moles of oxygen molecules would be produced dfrom the decomposition of 2.5 moles of potassium trioxochlorate (V)?

A. 2.50 B. 3.50 C. 3.75 D. 7.50

4. A balanced chemical equation obeys the law of

A. Conservation of mass

B. Definite proportions

C. Multiple proportions

- D. Conservation of energy
- 5. At 25°C and 1 atm, a gas occupies a volume of 1.50 dm<sup>3</sup>. What volume will it occupy at 100°C at 1 atm?

A. 1.88 dm<sup>3</sup> B......6.00 dm<sup>3</sup> C. 18.80 dm<sup>3</sup> D.60.00dm<sup>3</sup>

6. A gaseous mixture of 80.0 g of oxygen and 56.0 g of nitrogen has a total pressure of 1.8 atm. The partial pressure of oxygen in the mixture is

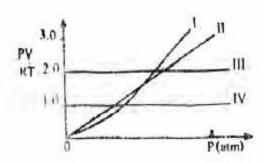

A. 0.8 atm B. C. 1.2 atm D.

D. 1.4 atm

1.0 atm

[O = 16, N = 14]

7.

Which of the curves above represents the behavior of 1 mole of an ideal gas?

A. 1 C. 111 B. 11 D. 1V

8. For iodine crystals to sublime on heating, the molecules must acquire energy that is

A. less than the forces of attraction in the solid

B. equal to the forces of attraction in the solid

C. necessary to melt the solid

- D. greater than the forces of attraction in both solid and the liquid phases
- 9. An element, E, has the electronic configuration  $1s^22s^22p^63s^23p^3$ . The reaction of E with a halogen X can give.

A. EX and EX

B. EX only

C.  $EX_5$  only

D.  $EX_2$  and  $EX_3$ 

10. Two atoms represented as  $^{235}_{92}$  U and  $^{238}_{92}$  U are

A. isomers B. allotropes

C. isotopes

D. anomers

11. As the difference in electronegativity between bonded atoms increase, polarity of the bond

A. decreases B. increases

C. remains unchanged

D. reduces to zero.

12. Which group of elements forms hydrides that are pyramidal in structure?

A. 111

B. 1V

C. V

D. VI

13. Water has a rather high boiling point despite its low molecular mass because of the presence of

A. hydrogen bonding

B. covalent bonding

C. ionic bonding

D. metallic bonding

14. Argon is used in gas-filled electric lamps because it helps to

A. prevent the reduction of the lamp filament

B. prevent oxidation of lamp filament

C. make lamp filaments glow brightly

D. keep the atmosphere in the lamp inert.

15. The air around a petroleum refinery is most likely to contain

A. CO<sub>2</sub> SO<sub>3</sub> and N<sub>2</sub>O

B.  $CO_2$  CO and  $N_2$ O

C.  $SO_3^2$  CO and  $NO_3$ 

D.  $PH_3H_2O$  and  $CO_2$ 

16. Water can be identified by the use of

A. an hydrogen copper(11) tetraoxosulphate(1V)

B. an hydrogen sodium trioxocarbonate(1V)

C. potassium heptaoxochromate(vii)

D. copper (11) trioxocarbonate(iv)

17. The phenomenon whereby sodium trioxocarbonate (1) decahydrate loses some of its water crystallization on exposure to the atmosphere is known as

A. deliquescence

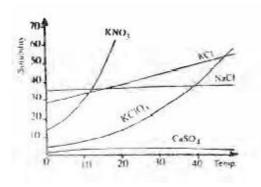

B. hygroscopy

C. effervescence

D. efflorescence

- 18. A student prepares 0.5 M solution each of hydrochloric and ethanoic acids and then measured their pH. The result would show that the
  - A. pH values are equal
  - B. HCl solution has higher pH
  - C. Sum of the pH values is 14
  - D. Ethanoic acid solution has a higher pH.

19.

For which salt in the graph above does the solubility increase most rapidly with rise in temperature

- A. CaSO<sub>4</sub> C. NaCl
- B. KNO<sub>3</sub>
- C. Tuci
- D. KCl
- 20.  $NH_3 + H_3O \longrightarrow NH_4 + H_2O$ . it may be deduced from the reaction above that
  - A. a redox reaction has occurred
  - B. H<sub>3</sub>O<sup>+</sup> acts as an oxidizing agent
  - C.  $H_3O^+$  acts as an acid
  - D. Water acts as an acid
- 21. 4.0 g of sodium hydroxide in 250 cm<sup>3</sup> of solution contains
  - A.  $0.40 \text{ moles per dm}^3$
  - B.  $0.10 \text{ moles per dm}^3$
  - C.  $0.04 \text{ moles per dm}^3$
  - D.  $0.02 \text{ moles per dm}^3$
- 22. During the electrolysis of a salt of metal M, a current of 0.05 A flow for 32 minutes 10 second and deposit 0.325 g of M. What is the charges of the metal ion?
  - A. 1
  - B.2
  - C.3
  - D.4

[M = 65, l = 96,500 C per mole of electron]

- 23. Which of the following reactions occurs at the anode during the electrolysis of a very dilute aqueous solution of sodium chloride?
  - A.  $OH-CH \longrightarrow OH$
  - B. Cl⁻- e⁻—→Cl
  - C.  $OH + Cl \longrightarrow HCl$
  - D.  $Na^+ + e^- \frac{Hg}{N}a/Hg$  amalgam

24. Half – cell reaction 
$$E^0$$

$$Cu2+(aq) + 2e \longrightarrow Cu(s) +0.34V$$

$$Fe2+(aq) + 2e \longrightarrow Fe -0.44V$$

$$Ba2+(aq) + 2e \longrightarrow Ba(s) -2.90V$$

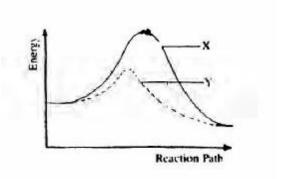

$$Zn2+(aq) + 2e \longrightarrow Zn(s) -0.76V$$

From the data above, it can be deduced that the most powerful reducing agent of the four metals is

- A. Cu C. Ba
- B. Fe D. Zn
- 25. The oxidation states of chlorine in HOCl, HClO<sub>3</sub> and HClO<sub>4</sub> are respectively
  - A. -1.+5 and +7
  - B. -1, -5 and 7
  - C. +1, +3 and +4
  - D. +1, +5 and +7
- 26. A reaction takes place spontaneously if
  - A.  $\ddot{A}G = O$
  - B.  $\ddot{A}S < O$  and  $\ddot{A}H > O$
  - C. ÄH < TÄS
  - D. ÄG>O
- 28. The standard enthalpies of formation of  $CO_2(g)$ ,  $H_2O(g)$  and CO(g) in kJ mol-1 are -394, -242 and -110 respectively. What is the standard enthalpy change for the reaction  $CO(g) + H_2O \longrightarrow CO_2(g) + H_2(g)$ ?
  - A. -42kJ mol-1
  - B. +42 kJmol-1
  - C. –262 kJ mol-1
  - D. +262 kJ mol-1
- 29. 10 g of a solid is in equilibrium with its own vapour. When 1 g of a small amount of solid is added, the vapour pressure
  - A. remain the same
  - B. drops

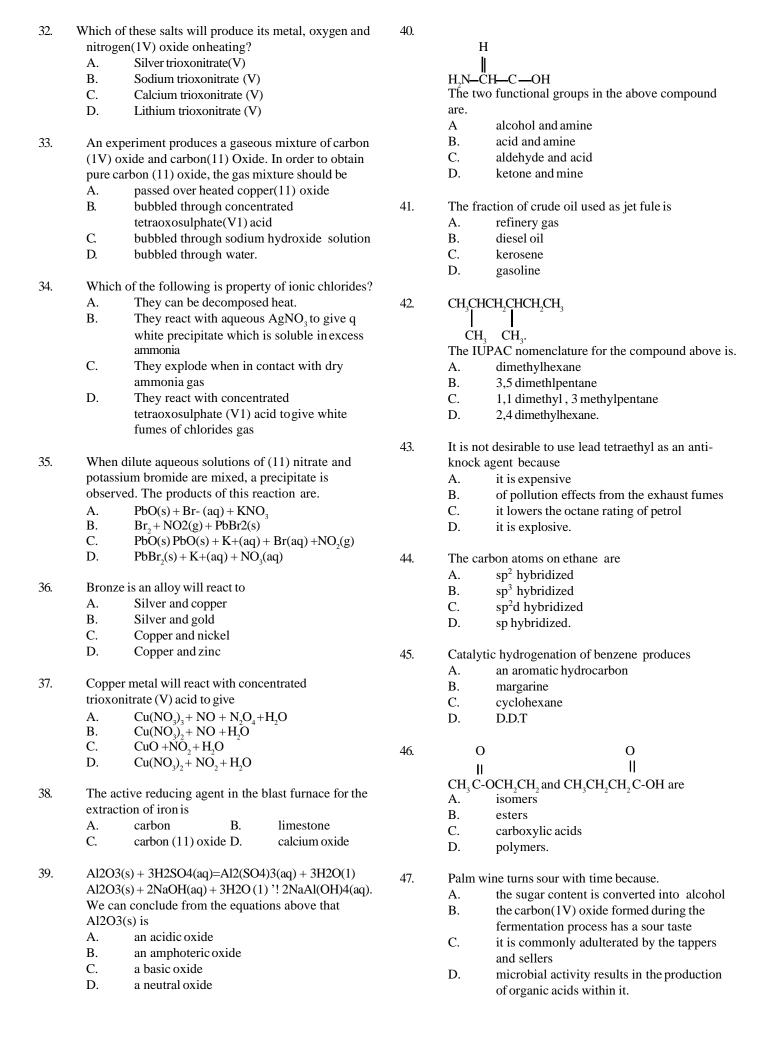

30.

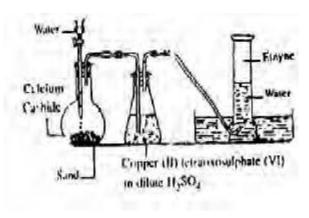

- C. increase by 1%
- D. increase by 99%

In the diagram above, curve X represents the energy profile for a homogeneous gaseous reaction. Which of the following conditions would produce curve Y for the same reaction?

- A. increase in temperature
- B. increase in the concentration of a rectant
- C. addition of a catalyst
- D. increase in pressure.
- 31.  $NaCl(s) + H_2SO_4(1) \longrightarrow HCl(g) + NaHSO_4(s)$ . In the reaction above. H2SO4 behaves as
  - A. a stron acid
  - B. an oxiding agent
  - C. a good solvent
  - D. a dehydrating agent.

The function of the copper (11) tetraoxosulphate (V1) in dilute  $H_2SO_4$  in the figure above is to

- A. Dry the gas
- B. Absorb phosphine impurity]
- C. Absorb ethene impurity
- D. Form an acetylide with ethyne.

- 49. Which of the represents Saponification?
  - A. reaction of carboxylic acids with sodium hydroxide
  - B. reaction of Alkanoates with acids
  - C. reaction of carboxylic acids with sodium alcohols
  - D. reaction of Alkanoates with sodium hydroxide.
- 50. The confirmatory test for Alkanoic acids in organic qualitative analysis is the
  - A. turning of wet blue litmus paper red
    - B. reaction with alkanols to form esters
    - C. reaction with sodium hydroxide to foemsalt and water
    - D. reaction with aqueous Na2CO3 to liberate a gas which turns lime water milky.

## Chemistry 1994

- 1. A mixture of sand, ammonium chloride and sodium chloride is best separated by
  - A. sublimation followed by addition of water and filtration
  - B. sublimation followed by addtion of water and evaporation
  - C. addition of water followed by filtration and sublimation
  - D. addition odf water followed by crystallization and sublimation.
- 2. A pure solid usually melts
  - A. over a wide range of temperature
  - B. over a narrow range of temperature
  - C. at a lower temperature than the impure one
  - D. at the same temperature as the impure one.
- At the same temperature and pressure, 50 cm<sup>3</sup> of nitrogen gas contains the same number of molecules as
  - A. 25 cm<sup>3</sup> of methane
  - B. 40 cm<sup>3</sup> of hydrogen
  - C. 50 cm <sup>3</sup> of ammonia
  - D. 100 cm<sup>3</sup> of chlorine
- 4. 8 g CH<sub>4</sub>occupies 11.2dm<sup>3</sup> at s.t.p. What volume would 22 g of CH<sub>3</sub>CH<sub>2</sub>CH occupy under the sme condition?
  - A.  $3.7 \, dm^3$
- В.
- $11.2 \; dm^3$
- C.  $22.4 \text{ dm}^3$
- D.  $33.6 \text{ dm}^3$ 
  - [C=12, H=1]
- 5. To what temperature must a gas 273 K be heated in order to double both its volume and pressure?
  - A. 298 K
- В.
- 546 K
- C. 819K
- D. 1092 K

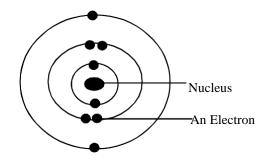

- 6. For a gas, the relative molecular mass is equal to 2Y. What is Y?
  - A. The mass of the gas
  - B. The vapour density of the gas
  - C. The volume of the gas
  - D. The temperature of the gas
- 7. The densities of two gases, X and Y are 0.5 g dm<sup>-3</sup> and 2.0 g dm<sup>-3</sup> respectively. What is the rate of diffusion of X relative to Y?
  - A. 0.1
- B. 0.5

4.0

- C. 2.0
- D.
- 8. An increase in temperature curves causes an increase in the pressure of a gas because
  - A. it decreases the number of Collision between the molecules
  - B. the molecules of the gas bombard the walls of the container more frequently
  - C. it increase the number of Collision between the molecules
  - D. it causes the molecules to combine
- 9. The shape of ammonia molecules is
  - A. trigonal planar
  - B. octahedral
  - C. square planar
  - D. tetrahedral.
- 10. The number of electrons in the valence shell of an element of atomic number 14 is
  - A. 1
- B.
- C. 3
- D.
- 4

2

- 11. Which of the following physical properties decreases down a group ion the periodic table?
  - A. Atomic radius
  - B. Ionic radius
  - C. Electropositivity
  - D. Electronegativity.

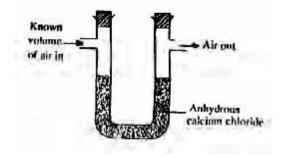

The diagram above represents atom of

- A. Mangnesium
- B. Helium
- C. Chlorine
- D. Neon
- 13. Elements X, Y and Z belongs to groups 1,V and V11 respectively. Which of the following is TRUE about the bond types of XZ and YZ
  - A. Both are electrovalent
  - B. Both are covalent
  - C. XY is electrovalent and YZ<sub>2</sub> is covalent
  - D. XZ is covalent and YZ<sub>3</sub> is electrovalent.
- 14. Which of the following atoms represents deuterium?

No of	No of	No of
protons	neutrons	electrons
A. 1	0	0
B. 1	0	1
C. 1	1	1
D. 1	2	1

12

The set-up above would be useful for determining the amount of

- A. Oxygen in air
- B. Water vapour in air
- C. CO<sub>2</sub> in air
- D. Argon in air.
- 16. A solid that absorbs water from the atmosphere and forms an aqueous solution is
  - A. hydrophilic
  - B. efflorescent
  - C. deliquescent
  - D. hygroscopic

- 17. A major effect of oil pollution in coastal water is the
  - A. destruction of marine life
  - B. desalination of water
  - C. increase in the acidity of the water
  - D. detoxification of the water.
- Sodium chloride has no solubility product value because of its.
  - A. saline nature
  - B. high solubility
  - C. low solubility
  - D. insolubility
- 19. The solubility in moles per dm³ of 20.2g of potassium trioxonitrate (V) dissolved in 100g of water at room temperature is
  - A. 0.10
  - B. 0.20
  - C. 1.00
  - D. 2.00
  - [K = 39, O = 16, N = 14]
- 20. A few drops of concentrated PCl are added to about 10cm<sup>3</sup> of a solution of pH 3.4. The pH of the resulting mixture is
  - A. less than 3.4
  - B. greater than 3.4
  - C. unaltered
  - D. the same as that of pure water
- 21. Which of the following compounds is a base?
  - A. CO<sub>2</sub>
  - B. CaO
  - C. H.PO.
  - D. CH,COOH
- 22. 20cm³ of a 2.0 M solution of ethanoic acid was added to excess of 0.05 M sodium hydroxide. The mass of the salt produced is
  - A. 2.50 g
  - B. 2.73 g
  - C. 3.28 g
  - D. 4. 54 g

$$[Na = 23, C = 12, O = 16, H = 1]$$

- 23. What volume of oxygen measured at s.t.p would be liberated on electrolysis by 9650 coulombs of electricity?
  - A.....22.4 dm3
  - B.....11.2 dm<sup>3</sup>
  - C.....1.12 dm<sup>3</sup>
  - $D. \dots 0.560 \, dm^3$
  - [Molar Volume of gas = 22.4 dm3, F = 96,500 C mol-1]
- 24. Crude copper could be purified by the electrolysis of concentrated copper911) chloride if the crude copper is
  - A. made both the anode and the cathode
  - B. made the cathode
  - C. made the anode
  - D. dissolved in the solution.

25.  $H^{-}(s) + H_{2}O(1) \longrightarrow H_{2}(g) + OH^{-}(aq)$ . From the equation above, it can be inferred that the

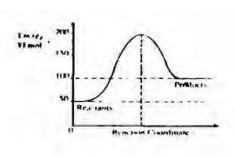

A. reaction is a double decomposition

B. hydride ion is reducing agent

C. hydride ion is an oxidizing agent

D. reaction is neutralization.

26

The  $\triangle H$  for the reaction represented by the energy profile above is

A. -100kJ mol<sup>-1</sup>

B.  $+100 \text{ kJmmol}^{-1}$ 

C. +50kJ mol<sup>-1</sup>

D.  $-50 \text{ kJ} \text{mol}^{-1}$ 

27. An anhydride is an oxide of a non-metal.

A. Which will not dissolve in water

B. whose solution water has pH greater than7

C. whose solution in water has a pH less than 7

D. whose solution in ware has a pH of 7

28.  $MnO_4(aq) + 8H^+(aq) + Fe^{2+}(aq) \rightarrow Mn^{2+}(aq) + 5Fe^{3+} + 4H_2O(1)$ . The oxidation number of manganese in the above reaction change from

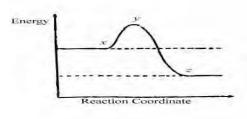

A. +7 to +2

B. +6 to +2

C. +5 to +2

D. +4 to+2

29.

In the diagram above, the activation energy is represented by

A. y-x

B. x

C. x-z

D. y

30. Which of the following is TRUE of Le Chatelier 's principle for an exothermic reaction?

A. Increase in temperature will cause an increase in equilibrium constant

B. Increase in temperature will cause a decrease in the equilibrium constant

C. Addition of catalyst will cause an increase in the equilibrium constant.

C. Addition of catalyst will cause a decrease in the equilibrium constant.

31. Which of the following are produced when ammonium trioxonirate(V) crystals are cautiously heated in a hard glass round bottomed flask?

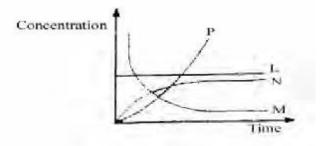

A.  $N_2O$  and steam

B. NO, and ammonia

C.  $N_2O_4$  and  $NO_2$ 

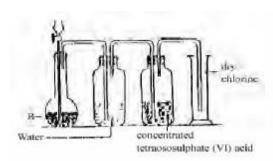

D. NO and NO<sub>2</sub>

32. 2HCl(aq) + CaCO<sub>3</sub>(s)—CaCl<sub>2</sub>(aq) + H2O(10 + CO<sub>2</sub>g). From the reaction above, which of the following curves represents the consumption of calcium trioxocarbonate(IV) as dilute HCl is added to it?

A. L C. N B. M D. P

33.

In the diagram above, R is a mixture of

A. potassium tetraoxochlorate(Vii) and concentrated H<sub>2</sub>SO<sub>4</sub>

B. potassium tetraoxomanganate (vii) and concentrated HCl

C. manganese(1V) oxide and concentrated HCl

D. manganese (1V) oxide and concentrated HCl

34. Which of these metals CANNOT replace hydrogen from alkaline solutions?

A. Aluminium

B. Zinc

C. Tin

D. Iron

35. Clothes should be properly rinsed with water after bleaching because

A. the bleach decolourizes the clothes

B. chlorine reacts with fabrics during bleaching

C. the clothes are sterilized during bleaching

D. hydrogen chloride solution is produced during bleaching.

- 36. Which of these solutions will give a white precipate with a solution of barium chloride acidified with hydrochloride acid?
  - A. Sodium trioxocarbonate(1V)
  - B. Sodium tetraoxosulphate
  - C. Sodium trioxosulphate (1V)
  - D. Sodium sulphides
- 37. SO<sub>3</sub> is NOT directly dissolved in water in the preparation of H<sub>2</sub>SO<sub>4</sub> by the contact process because.
  - A. the reaction between SO3 and water is violently exotheremic
  - B. acid is usually added to water and never water to acid
  - C. SO<sub>3</sub> is an acid not dissolve in water readily
  - D. SO<sub>3</sub> is an acid gas.
- 38. In an electrolytic set-up to protect iron from corrosion, the iron is
  - A. made the cathode
  - B. made the anode
  - C. used with a metal of lower electropositive potential
  - D. initially coated withtin
- 39. Which of the following is NOT true of metals?
  - A. They are good conductors of electricity
  - B. They ionize by electron loss
  - C. Their oxides are acidic
  - D. They have high melting points.
- 40. Which of the following is the correct order of decreasing activity of the metal Fe, Ca, Al and Na?
  - A. Fe > Ca > Al > Na
  - B. Na > Ca > Al > Fe
  - C. A1 > Fe > Na > Ca
  - D. Ca > Na > Fe > Al.

Η

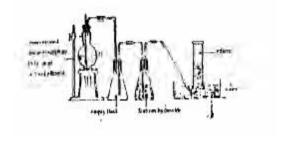

The IUPAC name of the compound above is

- A. 2,2-dimethyl but-1-yne
- B. 2,2-dimethyl but-1-ene
- C. 3,3-dimethyl but-1-ene
- D. 3,3-dimethyl but-1-yne
- 43. When sodium is added to ethanol, the products are
  - A. sodium hydroxide and water
  - B. sodium hydroxide and hydrogen
  - C. sodium ethnocide and water
  - D. sodium ethnocide and hydrogen.
- 44. The general formula of alkanones is
  - A. RCHO
  - B. R.CO
  - C. RCOOH
  - D. RCOOR

- 45. When sodium ethanoate is treated with a few drops of concentrated tetraoxosulphate(V1) acid one of the products is
  - A. CH,COOH
  - B. CH,COOH,
  - C. CH,COOC,H,
  - D. C2H<sub>4</sub>COOCH
- 46. One mole of a hydrocarbon contains 48 g of carbon. If its vapour density is 28, the hydrocarbon is
  - A. an alkane
  - B. an alkene
  - C. an alkyne
  - D. aromatic

[C=12, H=1]

#### Use the diagram below to answer questions 47 and 48.

The reaction taking place in flask G is known as

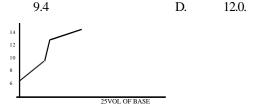

- A. hydrolysis
- B. double decomposition
- C. dehydration
- D. pyrolysis
- 48. The caustic soda solution in the conical flask serves to
  - A. dry ethene
  - B. remove carbon (1V) oxide from ethene
  - C. remove carbon (11) oxide from ethene
  - D. remove sulphur (1V0 oxide from ethene.
- 49. Which of the following orbital of carbon are mixed with hydrogen in methane?
  - A. 1s and 2p
  - B. 1s and 2s
  - C. 2s and 2p
  - D. 2s and 3p
- 50. Which of the following reagents will confirm the presence of instaurations in a compound?
  - A. Fehling's solution
  - B. Bromine water
  - C. Tollen's reagent
  - D. Benedict's solution

- A. strong acid versus strong base
- B. weak acid versus strong base

19.

NO. 20.

21.

C.

- C. strong acid versus weak base.
- D. weak acid versus weak base.

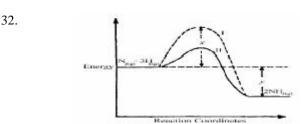

- A. anode and a direct current is used
- B. cathode and an alternating current is used
- C. anode and an alternating current is used.
- D. cathode and a direct current is used.
- 24. How many moles of copper would be deposited by passing 3F of electricity through a solution of copper (II) tetraoxosulphate (VI)?
  - A. 0.5 1.0 C. 1.5 D. 3.0 (F = 96500 C mol-1).
- 25.  $2Cl\text{-}_{\text{\tiny (aq)},!}CI\text{-}_{\text{\tiny (2g)}}\text{=}2e\text{-}_{\text{\tiny (aq)}.}$  The above half-cell occurring at the anode during the electrolysis of dilute ZnCI, solution is
  - ionization B. A. oxidation
  - C. reduction. D. recombination.
- Which of the following is a redox reaction? 26.  $KCI_{(ag)} + H_2SO_{4(aq)} \longrightarrow KHSO_{4(aq)} + HCI_{(aq)}$ 
  - $\begin{array}{c} 2FeBr_{2(ag)} + Br_{2} \longrightarrow 2FeBr_{3(aq)} \\ AgNO_{3(ag)} + FeCI_{3} \longrightarrow 3AgCI_{(aq)} + CO \ Fe(NO_{3})_{3(aq)} \end{array}$
  - D. H<sub>2</sub>CO + 14H<sup>+</sup>  $\rightarrow$ H<sub>2</sub>O(1) + CO.  $+6I^{-}$  $+ 7H O^{(1)+}$

27. 2(g)

> The change in the oxidation number of oxygen in the equation above is

- B. 1 A. O. C. 2 D. 7.
- 28. If an equilibrium reaction has "H < O, the reaction will proceed favourably in the forward reaction at
  - A. low temperature
  - B. high temperatures
  - C. all temperatures
  - all pressures.
- 29. Which of the following processes lead to increase in entrophy?
  - A. mixing a sample of NaCl and sand

- apour.
- tion.
- s shifted to the pressure?
- sed for the collection of
  - C. nitrogen
  - D. hydrogen chloride.

The activation energy of the uncatalysed reaction is

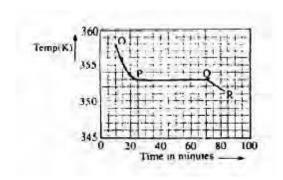

- A.x
- В. x + y
- C. х- у
- D.
- 33. It can be deduced that the rate of the reaction
  - for path I is higher than path II A.
  - В. for path II is higher than path I
  - C. is the same for both paths at all temperatures
  - D. depends on the values of both x and y at all pressures.
- 34. In the industrial production of hydrogen from natural gas, carbon (IV) oxide produced along with the hydrogen is removed by
  - A. washing under pressure
  - B. passing the mixture into the lime water
  - C. using ammoniacal copper (I)chloride
  - D. drying over phosphorus (V) oxide.
- 35. Sulpur exists in six forms in the solid state. This property is known as
  - A. isomerism В. allotrophy
  - C. D. isomorphism. isotopy
- 36. A gas that will turn orange potassium heptaoxodichromate (VI) solution to clear green is
  - A. sulpur (VI) oxide
  - hydrogen sulphide
  - C. sulpur (IV) oxide
  - D. hydrogen Chloride.
- 37. Which of the following ions will give a white precipitate with aqueous NaOH and soluble in excess of the base?
  - $Ca^{2+}$ A.
- B.  $Mg^2$
- C.  $Zn^{2+}$
- $Cu^{2+}$ . D.

38.	In the extraction of iron in the blast furnace, limestone is used to  A. release CO <sub>2</sub> for the reaction  B. reduce the iron  C. Increase in the strenght of Iron  D. remove impurities.	45.	Aromatic and aliphatic hydrocarbons can be distinguished from each other by the A. action of bromine B. use of polymerization reaction. C. Action of heat D. Use of oxidation reaction
<ul><li>39.</li><li>40</li></ul>	Which of the following compound will impart abrick- red colour to a non-luminous Busen flame?  A. NaCl B. LiCl C. CaCl <sub>2</sub> D. MgCl.  Group 1 A metals are not found free in nature because they A. are of low melting and boiling points	46.	The role of sodium chloride in the preparation of soap is to  A. purify the soap  B. separate the soap from glycerol  C. accelerate the decomposition of the fat oroil  D. react with glycerol.  CH <sub>3</sub> CH <sub>2</sub> =CH <sub>2</sub> -C-H
	<ul><li>B. have weak metallic bonding</li><li>C. conduct electricity and heat</li><li>D. are very reactive.</li></ul>	47.	The functional group represented in the compound above is
41.	CH COOH + CH CH OH Conc H SO X + Y. X and Y in the reaction of above are respectively		A. alkanol B. alkanal C. alkanone D. alkanoate
	A. CH <sub>3</sub> COCH <sub>3</sub> and H <sub>2</sub> O B. CH <sub>3</sub> CH <sub>2</sub> COCH <sub>2</sub> and H <sub>2</sub> O <sub>2</sub> C. CH <sub>3</sub> COOCH <sub>2</sub> CH <sub>3</sub> and H <sub>2</sub> O <sub>3</sub> D. CH <sub>3</sub> CH <sub>2</sub> CHO and CH <sub>4</sub> .	48.	$C_xH_y + 4O_2$ $3CO_2 + 2H_2O$ . The hydrocarbon, $C_xH_y$ in the reaction above is A. propane B. propene C. propyne D. propanone.
42	$CHCl_3 + Cl_2 \longrightarrow HCl + CCl_4$ . The reaction above is an example of  A. an addition reaction  B. a substitution reaction	49.	An example of a secondary amine is  A. propylene B. di-butylamine C . methylamine D. trimethylamine.
	<ul><li>C. chlorination reaction</li><li>D. a condensation reaction.</li></ul>	50.	The relatively high boiling points of alkanol are due to A. ionic bonding B. aromatic character
43.	CH <sub>3</sub> – CH – CH = CH – CH <sub>3</sub> CH <sub>3</sub> . The IUPAC nomenclature for the compound above is  A. 1.1-dimenthyilbut – ene B. 2-methlypnet 3 – ene C. 4,4 – dimethy – 1 but – 2 – ene D. 4 – methylpent – 2 – ene.		<ul><li>C. covalent bonding</li><li>D. hydrogen bonding.</li></ul>
44.	Which of the following pairs has compounds that are isomers?  A. propanal and propanone  B. ethanoic acid and ethylmethanoate  C. ethanoic acid and thane -1,2-diol  D. 2-methylbutnae and 2,2-dimethylbutane		
	Chemist	try 1	1997

- 1. 35 cm<sup>3</sup> of hydrogen was sparked with 12cm<sup>3</sup> of oxygen at  $110^{\circ}$  C and 760 mm Hg to produce steam. What percentage of the total volume gas left after the reaction is hydrogen
  - A. 11%
- B. 31%
- C. 35%
- D. 69%

- 2.85 g of an oxide of copper gave 2.52g of copper on reduction and 1.90 g of another oxide gave 1.52 g of copper on reduction. The data above illustrates the law of
  - A. constant composition
  - B. conservation of mass
  - C. reciprocal proportions
  - D. multiple proportions.

Use the graph below to answer question 3 and 4

A sample, X, solid at room temperature, was melted, heated to a temprature of 358 K and allowed to cool as shown in OPQR.

- 3. The section PQ indicate that X is
  - A. a mixture of salt
  - B. a hydrated salt
  - C. an ionic salt
  - D. a pure compound.
- 4.. The section OP suggests that X is in the
  - A. Liquid state
  - B. Solid/liquid state
  - C. Solid state
  - D. Gaseous state.
- 5. An element, X, format a volatile hydride XH<sup>3</sup> with a vapour density of 17.o. The relation mass of X is
  - A. 34.0
- B. 31.0
- C. 20.0
- D. 14.0
- 6. A mixture of 0.20 mole of Ar, 0.20 mole of  $N^2$  and 0.30 mole of He exerts a total pressure of 2.1 atm. The partial pressure of He in the mixture is
  - A. 0.90atm
- B. 0.80 atm
- C. 0.70atm
- D. 0.60 atm
- 7. If 30cm<sup>3</sup> of oxygen diffuses through a porous plug in 7s, how long will it take 60 cm<sup>3</sup> of chlorine to diffuse through the same plug
  - A. 12 s
- B. 14 s
- C. 21 s
- D. 30 s
- 8. The temperature of a body decreases when drops of liquid placed on it evaporates because
  - A. the atmospheric vapour pressure has a cooling effect on the body
  - B. a temperature gradient exists between the drops of liquid and the body
  - C. the heat of vapourization is drawn from the bodycausing it to cool
  - D. the random motion of the liquid molecules causes a cooling effect on the body.
- 9. The electron configuration of two elements with similar chemical properties are represented by
  - A.  $Is^2 2s^2 2p^5$  and  $Is^2 2s^2 2p^4$
  - B.  $Is^22s^2 2p^4$  and  $Is^22s^22p^63s^1$
  - $C \hspace{1cm} Is^22s^22p^63s^1 \hspace{1cm} and \hspace{1cm} Is^22sI$
  - D.  $Is^22s^2 2p^4$  and  $Is^22sI$

- 10. In the periodic table, what is the property that decrease along the period and increases down the group
  - A. Atomic number
  - B. Electron affinity.
  - C. Ionization potential
  - D. Atomic radius.

2 and 1

- 11. Two elements, P and Q with atomic numbers 11 and 8 respectively, combine chemically values of x and y are
  - A. 1 and 1

C.

B.

D.

- 1 and 2 3 and 1
- 12. Oxygen is a mixture of two isotopes  ${}^{16}_{8}$  O and  ${}^{18}_{8}$  O with relative abundance of 90% and 10% respectively. The relative atomic mass of oxygen
  - A. 16.0
- B. 16.2
- C. 17.0
- D. 18.0
- 13. 200cm³ of air was passed over heated copper in a syringe several times to produce copper (11) oxide. When cooled the final volume of air recorded was 158cm³. Estimate the percentage of oxygen in the air.
  - A. 31%
- B. 27%
- C. 21%
- D. 19%
- 14. Which of the following gases is the most dangerous pollutant
  - A. Hydrogen sulphide
  - B. Carbon (1V) oxide
  - C. Sulphur (1V) oxide
  - D. Carbon (11) oxide
- 15. A major process involve in the softening of hard water is the
  - A. conversion of a soluble calcium salt to its trioxocarbonate (1V)
  - B. decomposition of calcium trioxocarbonate (1V)
  - C. conversion of an insoluble calcium salt to its trioxocrbonate (1V)
  - D. oxidation of calcium atom to its ions.
- 16. On recrystallization, 20g of magnesium tetraoxosulphate (V1) forms 41 g of magnesium tetraoxosulphate (1V) crystals, MgSO<sub>4</sub>.yH<sub>2</sub>O. The value of y is
  - A. 1 C. 5
- B. 3 D. 7
- (Mg = 24, S=32, O=16, H=1)
- 17 A satyrated solution of AgCI was found to have a concentration of 1.30 x 100<sup>-5</sup> mol dm<sup>-3</sup>. The solution product of AgCI. therefore is.
  - A. 1.30x 10-5 mol 2 dm-6
  - B. 1.30 x 10-7 mol2 dm-6
  - C. 1.69 x 10-10 mol2 dm-6
  - D. 2.60 x 10-12 mol2 dm-6
- 18. The hydroxyl ion concentration, (OH-), in a solution of sodium hydroxide of pH 10.0 is
  - A. 10<sup>-10</sup> moldm<sup>-3</sup>
  - B.  $10^{-6} \, \text{mol dm}^{-3}$
  - C. 10<sup>-4</sup> mol dm<sup>-3</sup>
  - D. 10<sup>-2</sup> mol dm<sup>-3</sup>

19.	Which of the aqueous solution with the pH values below
	will liberate hydrogen when it reacts with magnesium
	metal?

13.0 A. C. 6.5

B. 7.0

D. 3.0

20. Given that 15.00cm3 of H2SO4 was required to completely neutralize 25.00 cm3 of 0.125 mol dm-3 NaOH, calculate the molar concentration of the acid solution.

> 0.925 moldm-3 A.

0.156 moldm-3

C.

0.104 mol dm - 3 D. 0.023 mol dm - 3

B.

When platinum electrodes are used during the 21. electrolysis of copper (11) tetraoxosulphate (1V) solution, the solution gets progressively

> A. acidic

B.

C. neutral D. amphoteric

22. How many faradays of electricity are required to deposit 0.20 mole of nickel, if 0.10 faraday of electricity deposited 2.98 g of nickel during electrolysis of its aqueous solution?

> 0.20 A. C. 0.40

B.

0.30 D. 0.50

( Ni =058.7, IF=96 500C mol<sup>-1</sup>)

23. What is the oxidation unmber of Z in K ZCI<sup>6</sup>?

A. -3

B. +3

C. -6

D. +6

 $2H_2S(g) + SO_2(g) + H2O_{(1)} \longrightarrow 3S(s) + 3H_2O(1)...(I)$ 24.  $3CuO(s) + 2NH_3(g) \longrightarrow 3Cu(s) + 3H_2(1) + N_2(g)...(ii)$ In the equation above, the oxidizing agent in (I) and the reducing agent in (ii) respectively are

> H<sub>2</sub>S and NH<sub>2</sub> A

В SO, and CuO

C. SO, and NH,

H<sub>2</sub>S and CuO D.

 $2SO_2(g)+O_2(g) \longleftrightarrow 2SO_3(g)$ 25.

In the reaction above, the standard heats of formation of  $SO_{2}(g)$  and  $SO_{3}(g)$  are -297 kJ mol-1 and -396 kJ mol<sup>-1</sup> respectively.

The heat change of the reaction is

A. -99 kJ mol-1 B. -198 kJ mol-1

C.  $+198 \, kJ \, mol-1$ 

D.

+683 kJ mol-1

 $\frac{1}{2}$  N2(g) +1/2 O2(g); H- = 89 kJ mol-1 26.

> If the entropy change for the reaction above at 25°C is 11.8 J, calculate the change in free energy, G, for the reaction at 25°C

A. 88.71 KJ

B. 85.48kJ

C.  $-204.00 \, kJ$ 

D. -3427.40 kJ

27. If the rate law obtained for a given reaction is rate=k(X)n(Y)m, what is the overall order of the reaction?

> A. nm

B. n

m C.

D. n-m

n+m

28. One method of driving the positon of equilibrium of an endothermic reaction forward isto

> increase temperature at constant pressure A.

В. decrease pressure at constant temperature

C. cool down the apparatus with water

D. decrease temperature at constant pressure.

29. Oxidation of concentrated hydrochloric acid with manganese(1V) oxide liberates a gas used in the

> manufacture of tooth pastes A.

B. treatment of simple goiter

C. valcanization of rubber

D. sterilization of water.

30. 
$$mE+nF \longrightarrow pG+qH$$

In the equation above, the equlibrium constant is given by

A.

(E)m(F)n

(G)p(H)q

B. (E)(F)

(G)(H)

C. (G)p(H)q

(E)m(F)n

D. (G)(H)

(E)(F)

31. A compound that will NOT produce oxygen on heating is

> potassium dioxonitrate(111) A.

В. lead (1V)oxide

C. potassium trioxochlorate (V)

D. potassium trioxochlorate (V)

32. Coal gas is made up to carbon (11) oxide, hydrogen and

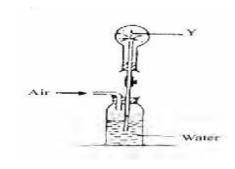

> A. nitrogen

B. air

C. argon

33.

D. methane

In the diagram above, the gas Y could be

hydrogen chloride A.

B. oxygen

C. carbon (1V) oxide

D. chlorine.

 $2X_{(aq)}^{-} + MnO2_{(s)}^{-} + 4H_{(aq)}^{+} \longrightarrow X_{2(g)}^{-} + Mn^{2+}_{(aq)}^{-} + 2H_{2}O_{(1)}^{-}$ 34.

The reaction above can be used for the laboratory preparation of all halogens except fluorine because it is

- a poisonous gas A.
- B. an oxidizing agent
- C. electronegative in nature
- D. highly reactive.
- 35. The reaction that occurs during the laboratory test for the presence of tetraoxosulphate (V1)

A. 
$$SO_{4(aq)}^{2} + Ba_{(aq)}^{2+} \underline{dilHNO_{3}} \underline{B}aSO_{4}$$

A. Cu 
$$+4H$$
  $+2SO^2$  CuSO (s)  $+2HO$   $+SO_{2(g)}^2$ 

C. 
$$4H^{+}_{(aq)} + 2SO2-4(aq) + 2e^{-} SO^{2-}_{4(aq)} + 2H^{2}$$

$$+ SO_{7(q)}$$

$$0$$

$$D. \qquad CuO_{_{(s)}} + 2H^{^{+}}_{_{(aq)}} + SO^{^{2-}}_{_{4(aq)}} \longrightarrow CuSO_{_{4(aq)}} + HO_{_{2\,(1)}}$$

- 36. The removal of rust from iron by treatment with tetraoxosulphate (V1) acid is based on the
  - hydrolysis of the iron A.
  - reaction of acid with base B.
  - C. oxidation of the rust
  - D. dehydration of the iron.
- Which of the following additives could improve the 37. quality of steel?
  - A. Silicon
- Sulphur and phosphorus
- Carbon. C.
- D. Chromium and nickel.
- 38. Sodium hydroxide is prepared commercially from sodium chloride solution by.
  - electrolysis using mercury as cathode A.
  - B. hydrolysis in steam using a catal.yst
  - C. electrolysis using iron as anode
  - D. treating sodium chloride with ammonia and carbon (1V) oxide.
- A sample of a substance containing only C and H burns 39 in excess O2to yield 4.4 g of CO2and 2.7 g of H2O. The empirical formular of the substance is
  - A. CH, C. CH,
- - C,H,
- (C=12, O=16, H=1)
- 40. An undesirable paraffin in the petroleum industry which is particularly prone to knocking is
  - A. iso-octane
  - B. n-heptane
  - C. iso-heptane
  - D. n-octane
- 41. СН,— СН—СН—СН,€Н

The IUPAC nomenclature of the organic compund with the above structural formular is

3-ethyl-2, 5-dimethylhexane A.

- C. 3-ethyl-1, 1, 4-trimethypentane
- 3-ethyl-2,5,5-trimethypentane D.
- 42. The reaction of an alkanol with an alkanoic acid in the presence of concentrated H,SO4 will produce an
  - A. Alkanal
  - B. Alkanonate
  - C. Alkanone
  - D. Alkayne.
- 43. The final product of the reaction of ethyne with

C. 
$$CH_3$$
— $CI_3$ 

44.

How many more isomers of the compound above can be obtained?

- A. 5
- $\mathbf{R}$ 4
- C. 3
- D. 2
- Synthesis detergents are preferred to soap for laundry 45. using hard water because
  - A. detergent are water soluble while soap not
  - the calcium salts of detergent are water soluble B.
  - C. the magnesium salt of soap is soluble in hard
  - D. soap does not have a hydrocarbon terminal chain.
- 46. The synthetic rubber obtained by the polymerization of chlorobutadiene in the presence of sodium is called
  - Teflon A.
- B. Isoprene
- C. Polythene
- D. Neoprene
- 47. 25cm<sup>3</sup> of 0.02 M KOH neutralized 0.03 g of a monobasic
  - В. 4-ethyl-2, 5-dimethylexane

organic acid having the general formula  $C_{{\scriptscriptstyle n}}H_{{\scriptscriptstyle 2n+1}}COOH.$  The molecular formula of the acid is

A. HCOOH B.  $C_2H_5COOH$  C.  $CH_3COOH$  D.  $C_3H_7COOH$  (C= 12, H=1, 0=16)

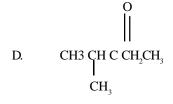

When Fehling's solution is added to two isomeric carbonyl compounds X and Y with the molecular formula  $C_5H_{10}O$ , compound X gives a red precipitate while Y does not react. It can be inferred that X is

O

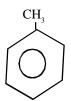

A .CH<sub>3</sub> C CH<sub>2</sub>CH<sub>2</sub>CH<sub>3</sub>

B.  $CH_3CH_2CH_2CH_2C\frac{H}{2}$ 

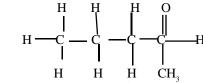

The compound above contains

- A. sp<sup>3</sup> hybridized carbon atoms only
- B. sp<sup>3</sup> hybridized carbon atoms only
- C. sp<sup>3</sup> and sp hybridized carbon atoms
- D. sp<sup>3</sup> and sp<sup>2</sup> hybridized carbon atoms.

The compound above is the product of the oxidation of

- A. 2 methylbutan 2 ol
- B. 2 methylbutan 1 o 1
- C. 2.3 dimenthylpropan 1 o1
- D. Pentan -2 01

### Chemistry 1998

9.

50.

- The addition of water to calcium oxide leads to 1.
- A. a physical change
  - B. a chemical change
  - C. the formation of mixture
  - D. an endothermic change.
- 2. A mixture of iron and sulphur can be separated by dissolving the mixture in
  - A. steam
  - B. dilute hydrochloric acid
  - C. dilute sodium hydroxide
  - D. benzene
- 3. 8.0 g of an element X reacted with an excess of copper (11) tetraoxosulphate (1V) solution to deposit 21.3 g of copper. The correct equation for the reaction is
  - $X_{(s)} + CuSO_{4(aq)} \longrightarrow Cu_{(s)} + XSO_{4(aq)}$ A.
    - B.
    - C.
    - $\begin{array}{c} X_{(s)} + 2 CuSO_{4(aq)} \longrightarrow 2 Cu_{(s)} + X(SO_4)_{(aq)} \\ 2X_{(s)} + 2 CuSO_{4(aq)} \longrightarrow Cu_{(s)} + X_2(SO_4)_{(aq)} \\ 2X_{(s)} + 3 CuSO_{4(aq)} \longrightarrow 3 Cu_{(s)} + X_2(SO)_{3(aq)} \end{array}$
- 4.  $C_3H_8(g) + 5O_2(g) \longrightarrow 4H_2O(g) + 3CO_2(g)$

From the equation abovem the volume of oxygen at s.t.p. required to burn 50cm3 of propane is

- 250cm<sup>3</sup> A.
- В. 150cm<sup>3</sup>
- C. 100cm<sup>3</sup>
- D. 50cm<sup>3</sup>
- 30cm3 of hydrogen was collected over water at 27°C 5. and 780 mm Hg. If the vapour pressure of water at the temperature of the experiement was 10mm Hgm calcuale the volume of the gas at 760mm Hg and 7°C.
  - $40.0 \text{cm}^3$ A.
- В. 35.7cm<sup>3</sup>
- C. 28.4cm<sup>3</sup>
- D. 25.2cm<sup>3</sup>

- 6. A given amount of gas occupies 10.0 dm3 at 4 atm. and 273°C. The number of moles of the gas present is
  - A.  $0.089 \, \text{mol}$
  - B. 1.90 mol
  - C. 3.80 mol
  - D. 5.70 mol

[Molar volume of gas at s.t.p.= 22.4 dm<sup>3</sup>]

- 7. If sulphur oxide and methane are released simultaneously at the opposite ends of narrow tube, the rates of diffusion R and R will be in the ratio A. 4:1 B.  $^{\rm CH4}$  B.  $^{\rm CH4}$  2:1 4:1
  - C. 1:2 [S=32, O= 16, C=12, H=1]
- 8. A solid begins to melt when
  - constituent particles acquire a greater kinetic A.
  - B. energy of vibration of particles of the solid is less than the intermolecular forces
  - C. Constituent particles acquire energy of the above the average kinetic energy
  - D. energy of vibration of particles of the solid equals the intermolecular forces.

The diagram above represents an atom that can combine

	with	chlorine to form			17.	90.0 g of MgCI, was placed in 50.0cm <sup>3</sup> of water to give a

carbon (1V) oxide nitrogen (1V) oxide and the

25. $2\text{FeCI2(s)} + \text{CL} \rightarrow 1$	2FeCI

The reducing agent in the reaction above is

B. CI,

$$A.$$
  $FeCI_2$   $C.$   $FeCI_3$ 

D. Fe

#### The reaction that is accompanied by a decrease in 26. entropy when carried out constant temperature is

A. 
$$N_2O_4 \longleftrightarrow NO_2$$

B. 
$$N_2 + 3H \rightleftharpoons 2NH$$

A. 
$$N_2O_{4(g)} \longrightarrow NO_2$$
  
B.  $N_2 + 3H \xrightarrow{\longleftarrow} 2NH_3$   
C.  $CaCO_3 \xrightarrow{\longleftarrow} CaO + CO_2$ 

D. 
$$2N_2H_4 \longrightarrow 3N_2 + 4H_2O$$

#### 27. 32g of anhydrous copper 11 tetraoxosulphate (1V) dissolved in 1 dm3 of water generated 13.0kJ of heat. The heat of solution is

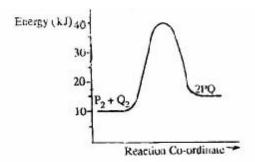

D. 260.0 kJ mol<sup>-1</sup>

In the electrochemical series above the strongest reducing agent is

$$Cu_{(s)}$$
 $Zn_{(s)}$ 

$$Cd_{(s)}$$
 $Mg_{(s)}$ 

In the diagram above, the activation energy for the backward reaction is

$$+5 \,\mathrm{kJ}$$

B. 
$$+15 \text{ kJ}$$

+30kJ

30. 
$$2X_{(g)} + Y_{(g)} \longrightarrow Z_{(g)}$$

In the equation above the rate of formation of Z is found to be independent of the concentration of Y and to quadruple when rate equation for the reaction is

A. 
$$R = k[X][Y]$$

B. 
$$R = k[X]^2[Y]$$

C. 
$$R = k[X]^2[Y]^2$$

D. 
$$R = k[X]^2[Y]^0$$

31. 
$$2CI_{2(g)} + 2H_{2(g)} \longleftrightarrow {}^{4HCI_{(g)} + O} _{2(g)} H^{o} = +115kJ \text{ mol}^{-1}$$

In the above equilibrium reaction a decrease in temperature will.

32. 
$$3\text{CuO}_{(s)} + 2\text{NH}_{3(g)} \longrightarrow 3\text{Cu}_{(s)} + 3\text{H}_2\text{O}_{(1)} + \text{N}_{2(g)}$$
  
(i)  $2\text{NH}_{3(s)} + 3\text{CI}_{2(g)} \cancel{\text{GH}}\text{CI}_{(s)} + \text{N}_{(1)} + \text{H}_2\text{O}$   
(ii)  $4\text{NH}_{3(s)} + 3\text{CI}_{2(g)} \cancel{\text{GH}}_2\text{O}_{(1)} + 2\text{N}_{2(g)} + \text{HCl}$   
The reactions represented by the equations above

The reactions represented by the equations above demonstrate the

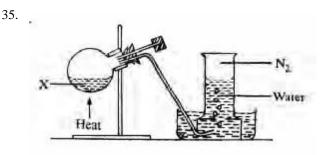

- basic properties of ammonia A.
- B. acidic properties of ammonia
- C. reducing properties of ammonia
- D. oxidizing properties of ammonia.

#### 33. A gas that trun a filter paper previously soaked in lead ethanoate solution black is

- hydrogen chloride A.
- В. hydrogen sulphide
- C. sulphur (1V) oxide
- D. sulphur (VI) oxide.

The precipitate will be insoluble in dilute

- HNO<sub>3</sub> but solublein ammonia solution A.
- В. HNO, and in ammonia solution
- HCI but soluble in ammonia solution C.
- D. HCI and in ammonia solution.

In the experiment above, X could be a solution of

- Sodium, trioxonirate (V) and ammonium A. chloride
- В. Sodium trioxonirate (111) and ammonium chloride
- C. lead (11) trioxonirate (V) and copper turnings
- D. potassium, trioxonirate (V) and copper turnings.

#### 36. The oxide that remains unchanged when heated in

À calcium B. aluminium

C. iron D. zinc

2. 56.00cm3 of a gas at s.t.p weighed 0.11 g, What is the vapour density of the gas?

> A. 11.00

22.00 B.

33.00 C.

D. 44.00

[Molar volume of a gas at s.t.p = 22.4 dm3]

3. Which of the following gases will diffuse fastest when passed through a porous plug?

Propane A.

B. Oxygen D. Ammonia

Methane

[H=1, C=12, N=14, O=16]

Which of the following will have its mass increased 4. when heated in air?

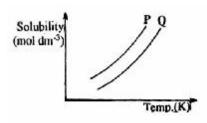

> Helium A.

B. Magnesium

C. Copper pyrites D.

Glass

5. What is the temperature of a given mass of a gas initially O°C and 9 atm, if the pressure is reduced to 3 6.

In the diagram above, the mixture of the two solid P and Q can be separated by

- distillation A.
- B. fractional distillation
- C. crystallization
- D. fractional crystallization.
- 7.  $Mg(s) + 2HCl(aq) \longrightarrow MgCl2(aq) + H2(g)$ . From the equation above, the mass of magnesium required to react with 250cm3 of .5 M HCl is
  - A. 0.3 g
- $1.5\,\mathrm{g}$
- C. 2.4g
- 3.0g
- [M = 27, Cl = 35.5]
- A gaseous metallic chloride MClx consist od 20.22% 8. of M by mass. The formula of the chloride is
  - A. **MC1**
- B. MCl<sub>2</sub>
- C. MCl,
- M,Cl
- [M = 27, Cl = 35.5]
- 9. In which of the following are water molecules in the most disorderly arrangement?
  - Ice at -10°C Ice at O°C A. C. B. Water at 100°C Steam at 100°C

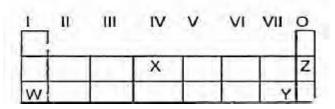

D.

- In order to remove one electron from 3s-orbital of 10. gaseous sodium atom, about 496 kJ mol-1 of energy is required. This energy is referred to as
  - A. electron affinity
- B. ionization energy
- C. activation energy
- D. electronegativity
- Nitrogen obtained from the liquefaction of air has a 11. higher density than that obtained from nitrogen containing compounds because the former contains
  - Α Water vapour
- B. Oxygen
- C. Carbon (1V) oxide
- D. Rare gases

Use the table below to answer question 13 and 14.

- The method that can be used to convert hard water 12. to soft water is
  - Chlorination Α.
  - B Passage over activated charcoal
  - C. the use of an ion exchange resin
  - D. aeration

Use the table below to answer question 13 and 14

- 13. The element that is likely to participate in covalent rather than ionic bonding is
  - Z A. C. X
- B. D.

Y

W

14. The least reactive elements is

A. W

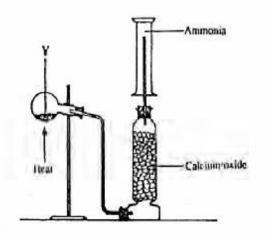

- C. Y
- X D.  $\mathbf{Z}$
- 15.  $1s^22s^22p^63s^23p^63d^74s^2$ . An element with the electron configuration above is a
  - non-metal A.
  - B. metal
  - C. transition element
  - D. group two element
- 16. Given that electronegativity increases across a period and decreases down a group in the periodic table, in which of the following compounds will the molecules be held together by the strongest hydrogen bond?
  - HF A. C.
- CH4<sub>(g)</sub>
- D. HCl<sub>(g)</sub>
- 17. 0.25 mole of hydrogen chloride was dissolved in distilled water and the volume made up to 0.50dm3. If 15.00cm3 of the solution requires 12.50 cm<sup>3</sup> of aqueous sodium trioxocarbonate (1V0 for neutralization, calculate the concentration of the alkaline solution.
  - $0.30 \text{ moldm}^{-3}$ A.
- 0.40 moldm<sup>-3</sup> B.
- C. 0.50 mol dm<sup>-3</sup>
- 0.60 moldm<sup>-3</sup> D.
- 18. The correct order of increasing oxidation number of the transition metal ions for the compounds K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>, V<sub>2</sub>O<sub>5</sub> and KmnO is
  - $V_2O_5 < K_2Cr_2O_7 < KMnO_4$ A.
  - $K_2Cr_2O_7$ ,  $< KMnO_4 < V_2O_5$ B.
  - C.  $KMnO_4 < K_2Cr_2O_7, < V_2O_5$
  - D.  $KMnO_4 < < V_2O_5 < K_2Cr_2O_7$
- 19. The set of pollutants that is most likely to be produced when petrol is accidentally spilled on plastic materials and ignited is
  - A. CO, CO, and SO,
  - В. CO, HCl and SO,
  - C. CO, CO, and HCl
  - D. SO2, CO2 and HCl

21.

- 20. What is observed when aqueous solution of each of tetraoxosulphate(V1) acid, potassium trioxides (V) and potassium iodine are mixed together?
  - A. white precipitate is formed
  - a green precipitate is formed В.
  - C. The mixture remains colourless
  - D. The mixture turns reddish-brown.

From the diagram above, the mass of crystals

	deposited when is cooled from 8 A. 117.00g C. 11.70g	80°C to 60oC is g B. In the diagram above Y is mixture of

- Calcium hydroxide and ammonium chloride A.
- B. Calcium hydroxide and sodium chloride(V)
- C. Sodium chloride and ammonium trioxonirate(V)
- D. Sodium dioxonitrate(lll) and ammonium chloride.
- 38. What properties of duralumin make it more useful than its constituent metals?
  - A. it is heavy with a high melting point
  - B. it is malleable and has high density
  - C. it is strong and light
  - D. it is hard and ductile
- 39. The pair of metals in the reactivity series that are usually extracted by the electrolysis of their ores is
  - A. Magnesium and zinc
  - B. Magnesium and calcium
  - C. Copper and zinc
  - D. Lead and calcium
- 40. A metal that can be extracted from cassiterite is
  - calcium A.
- B. magnesium
- C. tin
- D. copper
- Which of the following metals is passive to 41. concentrated trioxonirate(V) acid?
  - A. iron
- B.
- C. copper
- D. zinc
- 42. The hydrocarbon the burns in air with a sooty flame is
  - $C_{\epsilon}H_{\epsilon}$ A.

C.

- B. D.
- C,H  $C_6H_6$

tin

43. 2-methylprop-1-ene is an isomerof

 $C_{4}H_{10}$ 

- but-2-ene A.
- B. pent-l-ene
- C. 2-methylbut-ene
- D. 2-methylbut-l-ene

- 44. Which of the following is a solvent for perfumes?
  - $C_5H_{12}$ C.
- $C_1H_6$
- CH,COOH
- D. C,H,OH
- When excess ethanol is heated to 145oC in the presence 45. of concentrated H2SO4 the product is
  - A. ethyne
  - diethyl sulphate B.
  - C. diethyl ether
  - D. acetone
- 46. How many grammes of bromine will saturate 5.2 g of but-l-ene-3-yne?
  - 64.0 g A.
- 48.0 g B.
- C. 32.0g
- D.  $16.0\,\mathrm{g}$
- [C = 12, H = 1, Br = 80]
- 47. Polyvinyl chloride is used to produced
  - bread A.
- B. pencils

C. ink

- D. pipes
- 48. An organic compound that does not undergo a reaction with both hydrogen cyanide and hydroxylamine can be an
  - alkenes A.
- В. alkanal
- C. alkanone
- D. Alkanoic acid
- When two end alkyl groups of ethyl ethanoate are 49. interchanged, the compound formed is known as
  - A. methylethanoate
  - В. ethyl propionate
  - C. methylpronoste
  - D. propel ethanoate.
- 50.

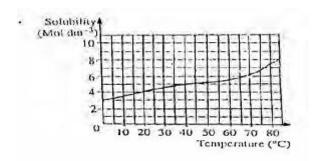

Which of the compounds above would react to take up two molecules of bromine during bromination?

- A. 1 only
- B. 111 only
- C. 1 and 11 only
- D. 11 and 111 only

- 19. 10dm³ of distilled water used to wash 2.0 g of a precipitate of AgCl. If the solubility product of AgCl is 2.0 x10<sup>-10</sup> moldm<sup>-6</sup>, what quantity of silver was lost in the process?
  - A. 2.029 x10<sup>-3</sup> mol dm<sup>-3</sup>
  - B. 1.414 x 10<sup>-3</sup> mol dm<sup>-3</sup>
  - C. 2.029 x 10<sup>-5</sup> mol dm<sup>-3</sup>
  - D. 1.414 x 10<sup>-5</sup> mol dm<sup>-3</sup>
- 20. Hydration of ions in solution is associated with
  - A. absorption of heat
  - B. reduction of heat
  - C. conduction of heat
  - D. liberation of heat
- 21.

The diagram above is the solubility curve of solute, X. Find the amount of X deposited when 500cm3 of solution of X is cooled from 60°C to 20°C

B.

- A. 0.745 mole
- 0.950 mole
- C. 2.375 moles D.
- 4.750 moles.
- 22.  $HCl_{(aq)} + H_2O_{(1)} \longleftrightarrow H_3O^+_{(aq)} + Cl_{(aq)}$ 
  - In the reaction above,  $Cl_{(aq)}^{-}$  is the
  - A. Conjugate acidB. Acid
  - C. Conjugate base
  - D. Base.
- 23. In which order are the following salts sensitive to light?
  - A. Agl>AgCl>AgBr
  - B. AgCl >Agl >AgBr
  - C. AgBr >AgCl >AgI
  - D. AgCl >AgBr >AgI
- 24. Thee pOH of a solution of 0.25 mol dm<sup>-3</sup> of hydrochloric acid is
  - A. 12.40
- B. 13.40
- C. 14.40
- D. 14.60
- 25.  $MnO_{4(aq)} + 8H^{+}_{(aq)}$  '!  $Mn^{2+}(aq) + 4HO_{2(1)}$

Y in the equation above represents

- A. 2e-
- B. 3e-
- C. 5e-
- D. 7<sup>e</sup>
- 26.  $\frac{1}{2}Zn^{2+}_{(aq)} + e^{-} \longrightarrow \frac{1}{2}Zn_{(s)}$

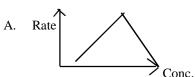

In the reaction above, calculate the quantity of

electricity required to discharge zinc

- A.  $0.965 \times 10^4 \text{C}$
- B.  $4.820 \times 10^4 \text{C}$
- C.  $9.650 \times 10^4 \text{C}$
- D.  $48.200 \times 10^4 \text{ C}$
- $[F = 96 500 \text{ C mol}^{-1}]$
- 27. Given that M is the mass of substance deposited in an electrolysis and Q the quantity of electricity consumed, then Faraday's law can be written as
  - A.  $M = \frac{Z}{Q}$
  - B. M = Q
  - C.  $M = \frac{Z}{2Q}$
  - E. M = QZ
- 28 0.46g of ethanol when burned raised the temperature of 50 g water by 14.3 K. Calculate the heat of combustion of ethanol.
  - A.  $+3\,000\,\text{kJ}\,\text{mol}^{-1}$
  - B. +300kJ mol<sup>-1</sup>
  - C. -300kJ mol<sup>-1</sup>
  - D. -3 000 kJ mol<sup>-1</sup>
    - [C = 12, O = 16, H = 1]

Specific heat capacity of water =  $4.2 \text{ jg}^{-1}\text{K}^{-1}$ 

- Powdered marble reacts with hydrochloric acid solution than the granular form because the powdered form has
  - A. more molecules
  - B. more atoms
  - C. large surface are
  - D. relatively largemass
- 30. The graph that describes a zero order reaction is

- B. Rate
  Conc
- C. Rate
- D. Rate

  Conc.

## Chemistry 2001

1. 25cm<sup>3</sup> of a gas X contains Z molecules at 15°C and 75 mm Hg. How many molecules will 25cm<sup>3</sup> of another gas Y contain at the same temperature and pressure?

A, 2Y, B. 2Z. C. Y, D. Z.

2. What mass of water is produced when 8.0g of hydrogen reacts with excess oxygen? A. 72.0g, B. 36.0g, C. 16.0g, D. 8.0g

### Use the graph below to answer questions 3 and 4

3. How long does it take all the solid to melt?

> A. 6.0mins,

B. 3.0mins,

C. 2.5mins. D. 1.0min

If the gas is cooled, at what temperature will it 4. start to condense?

> A. 175°C,

B.

250°C, 150°C

C.

125°C,

D.

Four elements W,X,Y and Z have atomic numbers 2,6,16 and 20 respectively. Which of these

elements is ameal? X,

A.

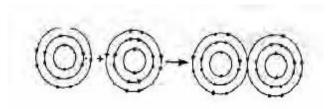

5.

Z, B.

C.

W.

D. Y

The diagram above represents the formation of

A. a metallic bond, B. a covalent bond,

C. an electrovalent bond.

D a coordinate covalent bond with relative abundance of 10%. The value of m is

A. 14, В. 12,

C. 18, D. 16

8. Cancerous growth are cured by exposure to

> A. x-rays,

B. betta-rays,

C. alpha-rays, D.

gamma-rays

9. Which of the following statement is correct about the average kinetic energy of the molecules of a gas?

A. it increases with increase in pressure,

B. it increases with increase in temperature,

C. It increases with increase in volume,

D. It increases at constant pressure.

10. Millikan's contribution to the development of atomic theory is the determination of

A. positive rays,

B. cathode rays,

C. charge to mass ratio,

D. charge on electron.

11. A particle that contains 9 protons, 10 neutrons and 10 electrons is

A. positive ion

B.neutral atom of a metal

neutral atom of a non-metal

negative ion.

12. An oxide XO<sub>2</sub> has a vapour density of 32. What is the atomic mass of X?

A. 20

32 B.

C. 14

D. 12

13. The chemical used for coagulation in water purification is

A. copper tetraoxosulphate (VI)

sodium tetraoxosulphate (VI)

aluminium tetraoxosulphate(VI)

calcium tetraoxosulphate(VI)

14. Environment pollution is worsened by the release from automobile exhausts of

A. heavy metals

B. water vapour

smoke

D. steam

15. Phosphorus is stored under water to prevent it from A. smelling В. dehydrating

C. catching fire

D.

becoming inert

16. Pure solvents are obtained by

A. evaporation

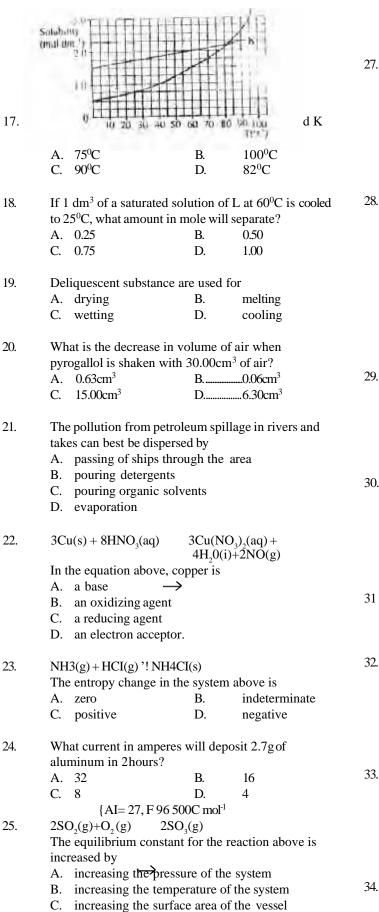

extraction B.

condensation

D.

distillation

7. An element X with relative atomic mass 16.2 contains two isotopes <sup>16</sup><sub>8</sub>X with relative abundance of 90% and <sup>m</sup><sub>8</sub>X

D. the addition of a catalyst to the system

	conductivity		
	A. decreases	B.	increases
	C. reduces to zero	D.	is unaffected.
27.	$C(s) + 2S(g)$ $CS_2$	H=89	kJmol <sub>-1</sub>
	The chemical equation  A. 89kJ of energy is  B. each of carbon and sure energy  D. 89 kJ of energy is	absorbed nd lphur alphur cont	has 89 kJ of energy
20	XX/L 1 C . 1 C . 11	1	1. 1
28.	Which of the following the rate of a chemical		
	rises?		r
	A. A lower proporti		
	necessary minim  B. The bonds in the		to react tolecules are more
	readily broken	reacting in	olecules are more
	C. The collision free	quency of t	he molecules
	increases  D. The molecular co	llisions bo	come more violent.
	D. The molecular co	misions occ	come more violent.
29.	In which of the follow	_	n have the oxidation
	number of nitrogen in		<b>(1)</b>
	A. 2NO(g) + Br <sub>2</sub> (l) B. FeSO4 (aq) + NO	2NOBr (g) Fe(1	$NO)SO_4(s)$
	C. $2NO(g) + CI_2(g)$	2NOCI(1	) 4()
	C. $2NO(g) + CI_2(g)$ D. $2NO(g) + O_2(g)$	$\rightarrow$ 2NO <sub>2</sub> (g	)
30.	$P_{(g)} + Q_{(g)}$		
	which of the following	-	ease the yield of R?
	A. Removing some B. Using <u>a larger class</u>		
	C. Adding a positive		
	D. Increasing the te	•	
31	Ethanoic acid is		
31	A. tribasic	B.	unionizeable
	C. dibasic	D.	monobasic
32.	A metal M displaces z This shows that	zinc from zi	nc chloride solution.
	A. M is more electron	-	
	<ul><li>B. Zinc is above hyo</li><li>C. Electron flow from</li></ul>		
	D. M is more electron		
33.	In which of the follow place?	ing reaction	ns does reduction tak
	A. 2O <sup>2</sup>	O <sup>2</sup>	+4e <sup>-</sup>
	B: Fe <sup>2+</sup> - e	——Н	$Fe^{3+}$
	B: $E_{H}^{2+} - e_{-}$ D. $Cr - 2e^{-}$	2	Cr <sup>2+</sup>

C.

Rerverisble

D.

Ionic.

#### empirical formula dissolve in each other in the column B. molecular formula A. C. structural formula B. move at different speeds in the column D. general formula C. react with the solvent react with each other. 2. Which of the following gases contains the least number of atoms at s.t.p? 4. A compound contain 31.91% potassium, 28.93% 7 moles of argon A. chlorine and the rest oxygen. What is the chemical B. 4 moles of chlorine formula of the compound? C. 3 moles of ozone **KClO** B. KClO, A. D.

1 mole of butane C. D. KClO, KClO,

3.

The chromatographic separation of ink is based on the 5. A little quantity of trichloromethane (b.pt.60°C) was added ability of the components to to a large quantity of ethanol ((b.pt.78°C). The most probable boiling point of the resultant mixture is from.

A.

 $60^{\circ}\text{C} - 78^{\circ}\text{C} \text{ B. } 69^{\circ}\text{C} - 70^{\circ}\text{C}$ 

	C.	70°C - 74°C	D.	82°C - 84	4°C	15.	1

			ъ		

- A. Ag B. Au C. Cu D. Na
- 23. Which of the following statement is true of a proton?
  - The mass of a proton is 1.0008 g
  - The mass of a proton is B.
  - C. The mass of proton is 1840 times the mass of an electron
  - D. The total mass of the proton in a particular nucleus is always half the nucleus is always half the nuclear mass.
- 24. <sup>4</sup> С X + B

X in the equation above represents.

- $^{14} \, _{7} \, N$ A.  $^{12}$   $^{'}$ C C.
- B.  $^{12}$ B D.
- 25. A gas-X-diffuses twice as fast as gas Y under the same condition. If the relative molecular mass of X is 28,
  - A. 14
  - calculate the relative molecular mass of Y B. 56
  - C. 112
- D. 120
- Which of the following chlorides would exhibit the least 26. ionic character?
  - A. LiCl
- B. MgCl<sub>2</sub>
- C. CaCl.
- D. AlCl,
- A fixed mass of gas has a volume of 92 cm<sup>3</sup> at 3°C. What 27. will be its volume at 18°C if the pressure remains constant?
  - A.  $552.0\,\mathrm{cm}^{3}$ C.  $87.3 \, \text{cm}^3$
- $.97.0 \, \text{cm}^3$ D.  $15.3 \, \text{cm}^3$
- The processes which return carbon(1V) oxide to the 28. atmosphere include
  - A. Photosynthesis, respiration and transpiration
  - B. Respiration, decay and combustion
  - C. Photosynthesis, decay and respiration
  - Ozone depletion, combustion and decay. D.
- 29. The postulate of Dalton's atomic theory which still hold is that
  - A. all element are made of small indivisible particles
  - B. particles of different elements combine in a simple whole number ration
  - C. atoms can neither be created nor destroy ed
  - the particles of the same element are exactly D. alike
- 30. If 0.75 mole of cyclopropane and 0.66 mole of oxygen are mixed in a vessel with a total pressure of 0.7 atmosphere, what is the partial pressure of oxygen in the mixture?
  - A. 0.22 atmosphere
  - B. 0.33 atmosphere

- C. 0.44 atmosphere
- D. 0.55 atmosphere
- 31. When H<sub>2</sub>S is passed into a solution of iron (iii) chloride, the solution turns
  - A. brown
- B. pale green
- C. colourless
- D. pale red.
- Which of the following equations shows that a reaction is in equilibrium?
  - A. G = H - T S
  - B. G < O

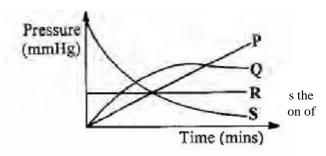

32.

34.

- C. G = O
- D. G > O
- $2Cu_{_{(\S)}} + SO_{_{2(g)}}$ 33.  $Cu_{2(s)}^S + O_{2(g)}$

What is the change in the oxidation number of copper in the reaction above?

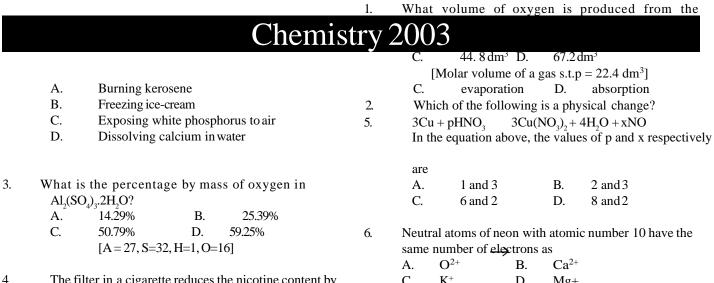

- $\sqrt{Q}$  to +2A.
- B.  $\sqrt{Q}$  to +1
- C.  $\pm 1 \text{ to } 0$
- D. +2 t<del>o+}</del>

- C. R
- D. S
- E.
- 35. In the reaction E + FG + H. the backward reaction is favoured if the concentration of
  - E is reduced A.
  - B. G is reduced
  - C. F is increases
  - D. E is increased
- 36. The products of the electrolysis of dilute sodium hydroxide using platinum electrodes are
  - sodium metal and oxygen gas A.
  - B. hydrogen and oxygen gases
  - C. water and hydrogen gas
  - D. water and sodium metal
- $\begin{array}{ll} PCl_{_{5(g)}} & PCl_{_{3(g)}} + Cl_{_{2(g)}} \\ \text{In the reaction above, a decrease in pressure will} \end{array}$ 37.

- A. increase the yield of PCl<sub>2</sub>
- B. increase the yields of PCl,
- C. accelerate the reaction
- D. decelerate the reaction

38.	betwe A. B. C. D. What	arrhenius equation of en the speed of a rea catalyst activation energy molecular collision heat of reaction	action ar		45.		n a salt loses its wat sphere exposure, the		
39.	A. B. C. D.	catalyst activation energ molecular collision	у	143					s is said to be

33.	Hydrogen can be displace form a hot alkaline solution	46	m; :	1 . 2		,	
	by.	43.					is used in local soap
	A. Fe B. Cu		makir	ng because	11 conta	ıns	

- B. sodium hydroxide
- C. potassium hydroxide
- D. soluble carbonates and hydrogen carbonates.
- 44. The formula for ethyl butanoate is
  - A. C<sub>3</sub>H<sub>7</sub>COOC<sub>2</sub>H<sub>5</sub> B. C<sub>2</sub>H<sub>5</sub>COOC<sub>3</sub>H<sub>7</sub> C. C<sub>4</sub>H<sub>6</sub>COOC<sub>5</sub>H<sub>5</sub> D. C<sub>5</sub>H<sub>5</sub>COOC<sub>4</sub>H<sub>6</sub>
- 45. The type of reaction that is peculiar to benzene is
  - A. addition B. hydrolysis
  - C. polymerization D. substitution
- 46. Ethanol reacts with excess acidified K<sub>2</sub>Cr<sub>2</sub>O<sub>2</sub>
  - A. ethanedioc acid B. ethanol
  - C. ethyl ethanoate D. ethanoic acid
- 47. A compound contains 40.0% caron 6.7% hydrogen and 53.3% oxygen. If the molar mass of the compound is 180, find the molecular formula.
  - A. CH<sub>2</sub>O C. C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>
- B.  $C_3H_6O_3$
- D.  $C_6H_6O_3$
- [H=1, C=12, O=16]

- 48. The process by which atoms are rearrange into different molecular structures in the petroleum refining process is referred to as
  - A. catalytic cracking B. hydrocracking
  - C. plolymerization D. reforming
- 49. Which of the following is found in cotton
  - A. Starch
- B. Cellulose
- C. Fat D. Oil
- 50. The principal constituent of natural gas is
  - A. methane
- B. ethane
- C. propane
- D. butane.

## Chemistry 2004

- 1. In the electrolysis of brine, the anode is
  - A. Zinc
  - B. Platinum
  - C. Carbon
  - D. Copper.
- 2.  $N_2O_{4(s)} \rightarrow 2NO_{2(g)}$

In the endothermic reaction above, more product formation will be favoured by

- A. a decrease in pressure a decrease in volume
- C. an increase in pressure
- D. a constant volume
- 3. The oxidation state of Chlorine in HClO<sub>4</sub> is
  - A. -1
- B. 5
- C. +7
- D. +1
- 4. Which of the following hydrogen halides has the highest entropy value?
  - A.
- HBr
- B. HF
- C. HI
- D. HCl
- 5. The mass of silver deposited when a current of 10A is passed through a solution of silver salt for 4830s
  - A. 54.0 g
- B. 27.0 g
- C. 13.5 g
- D. 108.0 g
- $[Ag = 108, F = 96500 \text{ C mol}^{-1}]$
- 6. Which of the following acts as both a reducing and
  - an oxidizing agent? A.  $H_2S$  C.
- B. CO<sub>2</sub>
- С. <sub>Н,</sub>
- D. SO,

- 7. Which of the following shows little or not net reaction when the volume of the system is decreased?
  - A.  $2O_{3(g)} \longleftrightarrow 3O_{2}$
  - B.  $H_{2(g)}^{3(g)} + I_{2(g)} > 2HI_{(g)}$
  - $\begin{array}{ccc} C. & 2NO & N2O \\ D. & PCl_{5(g} & PCl_{3(g)} & Cl_{2(g)} \end{array}$

- 8. Given that  $\triangle H$  [CO] is -110.4 kJmol<sup>-1</sup> and  $\triangle H$ [CO<sub>2</sub>] is  $-393^{\circ}$  kJmol<sup>-1</sup>, the energy change for the reaction above is
  - A. -282.6kJ
- B. +503.7 kJ
- C. –503.7 kJ
- D.  $+282.6 \,\text{kJ}$

$$ZnO + CO \longrightarrow Zn + CO_2$$

- 9. In the reaction above, Zinc has been
  - A. displaced
- B. oxidized
- C. reduced
- D. decomposed.
- 10. What volume of gas is evolved at s.t.p. if 2g of Calcium trioxocarbonate(iv) is added to a solution of hydrochloric acid?
  - A. 224 cm<sup>3</sup> C. 2240 cm<sup>3</sup>
- B. 112cm<sup>3</sup>
- . 2240 cm² [Ca = 40. C
- D.  $448 \text{ cm}^3$
- [Ca = 40, C=12, O=16, Cl = 35.5, H= 1, Molar volume of a gas at s.t.p = 22.4 dm<sup>3</sup>]
- 11. A chemical reaction is always associated with
  - A. a change in the nature of the reactants
  - B. the formation of new substances
  - C. a change in the volume of the reactants an increase in the composition of one of
    - the substances,

12.	When a solid substance disappears completely as gas on heating, the substance is said to have undergone.						Alkanol + Alkanoic acid → Ester + Water  The reverse reaction of the equation above is known as					
	A. sul	olimation tillation	B. D.	crystal evapor	lization ation		A. C.	saponification fermentation	B. D.	hydrolysis hydration
